Hi Rebecca,

I am contacting you again regarding the Verizon small cell installations, specifically, regarding the pole in front of my house (Cluster 2, Node 155 - 17PLN-00170). I wrote a few emails to you, the Planning Director, and the Architecture Review Board, strongly opposing selecting this pole, because it fails to meet the criteria laid out in the design guidelines.

A few months ago, I learned about a viable alternate pole, Node 155-F. I emailed you at that time about this alternate, and I am writing again to ask the City to give a full review of this alternate. Node 155-F is a much better option, for the following reasons:

1. It is much less visible
2. It has much better tree screening
3. It is not next to a two-story home
4. It is on a street with much less traffic

If you would come and take a visual inspection, you would agree with me.

I spoke with Mary and she confirmed that 155-F is a viable alternate, and she agreed with the four points I just mentioned.

So I strongly ask the city to request Verizon to submit all paperwork related to this alternate. Thank you so much and please keep me informed on the progress.

Thanks,
Melody
