INDEX

PROJECT DATA

This application is the 2nd Phase of a project, where the 1st Phase was approved on March 2, 2017 (16PLN-00190). The approved existing Phase 1 includes Building 1, the below-grade garage, and stair & elevator pavilion in the courtyard, trash elclosure and the garage portals. Phase 2 includes Building 2, a second trash enclosure, and surface parking on the east lower tier of the property.

Development Standards	Standard		Proposed Project		Conforms
Lot Size	none		443,005	10.17 acres	yes
Min Bldg Setback:					
Front Yard - (west) Hanover Street	50'		50'		yes
Side Yard (south)	20'		350' - 6"		yes
Side Yard (north)	20'		285'		yes
Rear Yard (east) Residential	50'		228'		yes
Max Site Coverage	132,902	30%			
Existing Phase 1 (ground floor)			55,000		
Proposed Phase 2 (ground floor)			32,555		
Total Coverage Proposed (ground floor)			**87,555**	20%	yes
Floor Area Ratio (FAR)	177,202	40%			
Existing Phase 1			110,000		
Proposed Phase 2 (see total Bldg Area Breakdn Below)			67,202		
Total FAR Proposed			**177,202**	40%	yes
Max Height *	35'		35'		yes
Daylight Plane	NA		NA		yes
Parking Required Ph 1 & 2 Combined	591	1/300sf			
Parking Provided					
Lower Garage			167		
Upper Garage			191		
Upper Surface			27		
Lower Surface			206		
subtotal			**591**		yes
Bicycle Parking (minimum), Ord. Section 18.52.040	59	1/3000 sf			
Short Term	12	20%	12		yes
Long Term	47	80%	47		yes
Phase 2 Building Area Breakdown:					
Trash Enclosure (included in FAR)			262		
Utility Rooms Added to Ph1 Garage (included in FAR)			423		
Base Building (included in FAR)			66,517		
Subtotal			67,202	*this is he gross area of FAR elements*	
Base Building FAR			66,517		
Ammenity Allowance +/- 5% (not included in FAR)			3,783		
Subtotal			70,300	*this is the gross area of ph 2 building*	

PARKING RESERVE

Please note that the City minimum number of spaces, 591combined between existing Phase 1 and proposed Phase 2, will be constructed with the initial construction. The balance of the spaces shown in this submittal will be landscaped initially and held in reserve as is the policy desired by Stanford. These spaces may be converted into actual parking spaces if required by on-site traffic demands in the future, and at the discretion of the Building Owner. Please see Sire Plan, Sheet A 1.1 for location of spaces that will be held in reserve.

NOTE:

The proposed site was split from a larger site (See sheet C0.0).
The data for the remainder site is as follows:
Total Site = 686,854 SF
Existing FAR (Net or Amenity space) = 158,936 SF or 23%
Coverage = 127,272 SF/686,854 SF = 19%

Legend:

Y - Yes; the measure is selected as mandatory
N - No; the measure is not selected as an elective
[N] - New Construction

Instructions:

The Green Building Survey is a required project submittal. The survey can be found at the following link. The survey shall be completed on Survey Monkey and a screenshot shall be included on a seperate page in this plan set. Please indicate the reference page here G1.0.2.

The Energy Star Benchmark Portfolio profile is a required project submittal. The profile can be found at the follwoing link. The portfolio profile shall be opened and a screenshot shall be included on a seperate page in this plan set. Please indicate the reference page here G1.0.2.

Acknowledgement

This project is required to comply with the State California Green Building Code (T24 Part 11) and the City of Palo Alto's local amendments (PAMC 16.14). I, the **property owner / legal representative**, acknowledge and understand the requirements and penalties for noncompliance ($50 per ton of waste not diverted from the landfill with a minimum of $1000, and $500 a day for the remaining green building measure noncompliance). I am responsible for all activities performed by design team members, contractors and subcontractors in meeting the requirements. I understand that the project may be subject to a **Green Building Incremental Verification** (IVR #112) during Rough Inspection and a **Green Building Final Inspection** (IVR# 974) prior to scheduling the final inspection. The team will consult the **Palo Alto Green Building Inspection Checklist** to verify compliance. I also understand that my project may be subject to an energy or water performance review to assess compliance with the program after construction and during operation.
Note: In lieu of a signature, an attachment letter is acceptable if the owner is not local and cannot sign this GB-1 sheet.

SCHEDULE A GREEN BUILDING INCREMENTAL VERIFICATION (IVR#112) DURING ROUGH INSPECTION

Schedule a Green Building Incremental Verification (IVR#112) if any of the following CALGreen provisions or PAMC Sections are marked with an "X" under the "Y" column of this sheet.

- CALGreen 5.303.1.1 Separate Meters
- CALGreen 5.303.1.2 Separate Meters
- PAMC 16.14.190 Recycled Water Interior Infrastructure
- PAMC 16.14.230 Recycled Water for Irrigation
- CALGreen 5.504.1.3 Temporary Ventilation
- CALGreen 5.504.3 Duct & HVAC Protection
- CALGreen A5.504.1 IAQ During Construction

SECTION TO BE COMPLETED AFTER CONSTRUCTION

In order to schedule a final building inspection with the Building Department, follow the procedures below.

☐ Schedule a **two-part** Final Green Building Inspection with the City Green Building Personnel in accordance with the Palo Alto Non-Residential Green Building Inspection Guideline.

☐ At Part 1 of the Final Green Building Inspection prepare all submittals and supporting documentation for the items identified with a "X" under the "Y" column of this sheet in accordance with the Green Building Inspection Guideline.

☐ At Part 2 of the Final Green Building Inspection prepare for a field inspection for the items identified with a "X" under the "Y" column of this sheet in accordance with the Green Building Inspection Guideline.

I certify that:

☐ There have been no alterations that have impacted the energy report for the project, unless the new report is provided.

☐ All mandatory CALGreen measures and required electives noted in the checklist have been implemented, unless a new checklist is provided along with support for alternative electives claimed.

☐ **Within six months (6) from the date of final inspection I will provide the** City with the project's Commissioning Report (only required for new projects over 10,000 SF) and execute compliance with landscaping measures, unless completed at the time of final inspection.

Signature (Owner) Signature (Contractor)
Sign only after construction is completed.

PARKING RESERVE

Please see Data SHeet CS 0.1
for note regarding Parking Reserve.

The City minimum parking count will
be provided at the outset of the project, and
the spaces in the perimeter rows shown here
will initially be landscaped with groundcover.

As on-site parking demand warrents, the Owner
may elect to construct these reserved spaces.

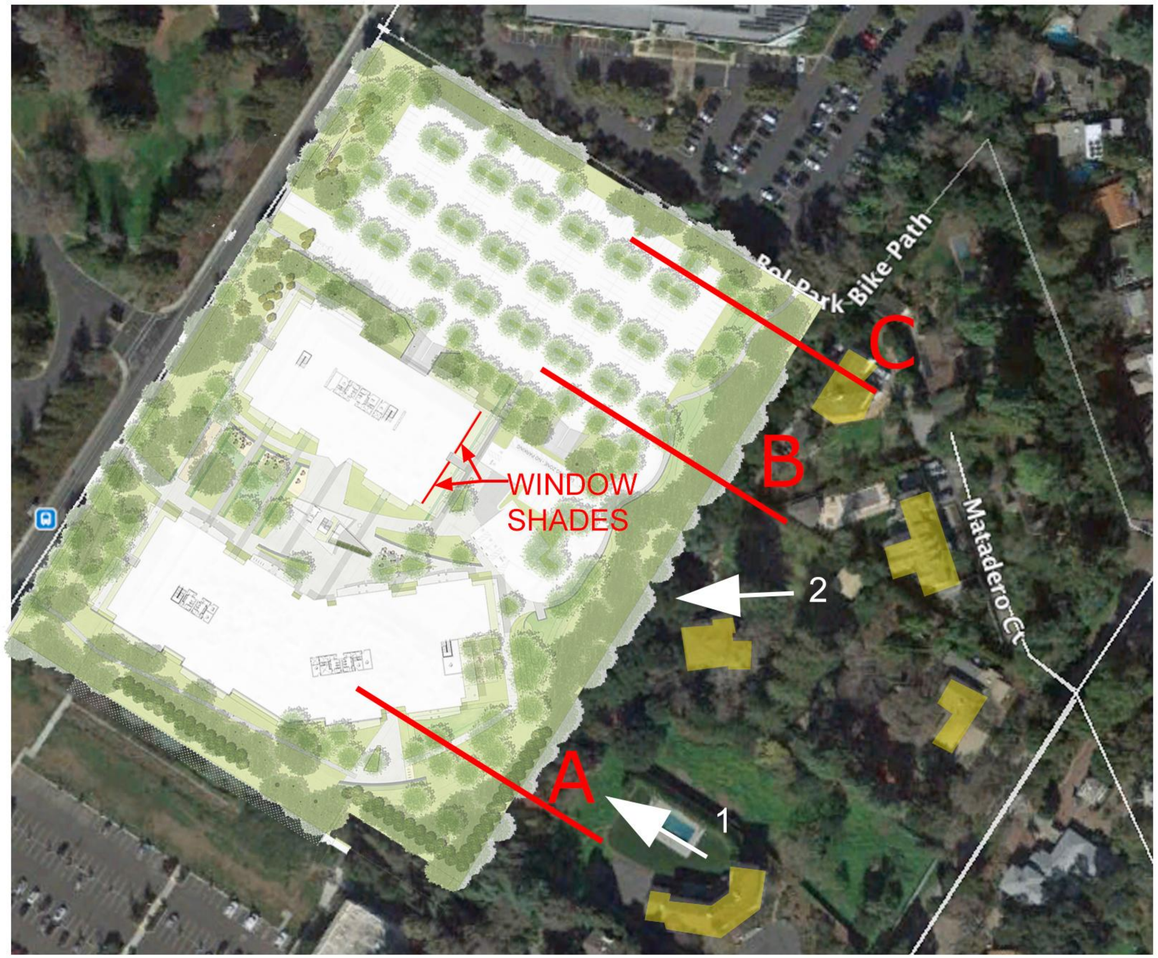
Typical Views from Neighbors.



SCREENING STRATEGY:

please see next two sheets for site sections

An important goal for this project is to mitigate noise and light to our residential neighbors to the east. The following strategies are being utilized:

- **Setback**: There is an existing 50' Landscape Overlay setback on the east property line. This project holds the buildings back an **additional +/- 178' beyond that**.
- Windows on the short end of the building will have clear fritted glass in the lower 30" to **avoid floor to ceiling clear glass**.
- **Low site walls and earth berms** will mitigate car headlights and car noise at the ground floor.
- **Existing mature landscaping** currently blocks much of the view between properties, and that will be **augmented with plant material and solid hedges.**
- **Window Shades**: This project shall incorporate internal window shades on the first and second floors of the east elevation.

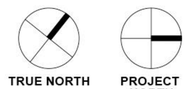
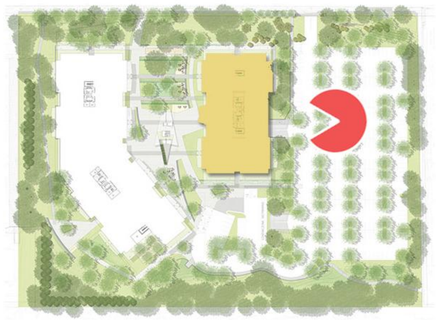
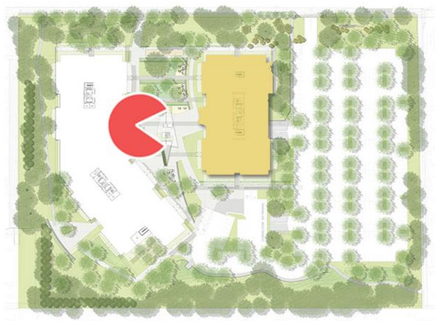
RENDERING - CENTRAL COURTYARD

A 3.1

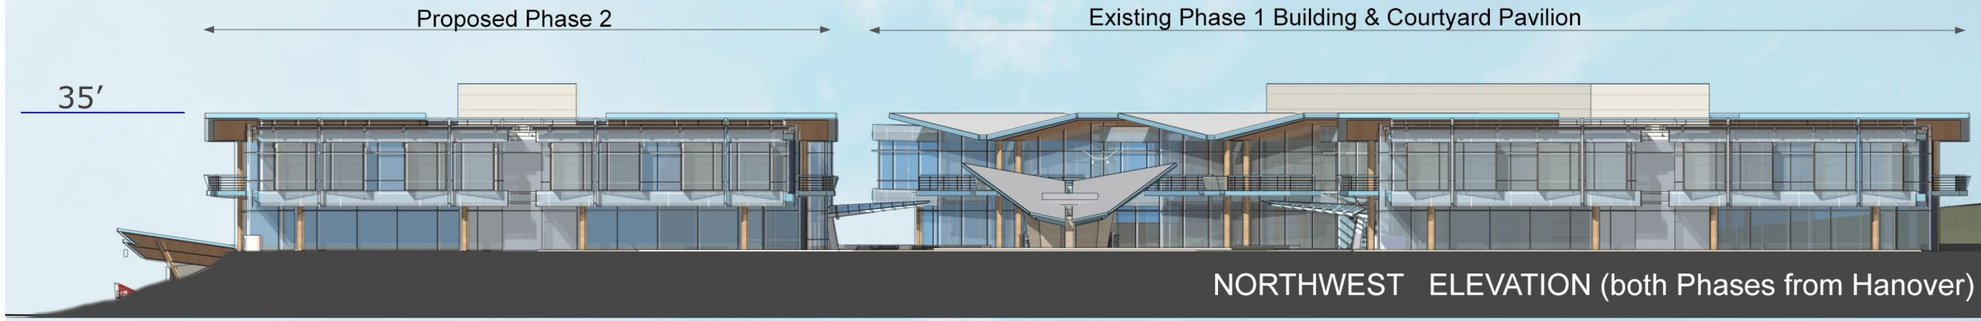
June 14, 2017





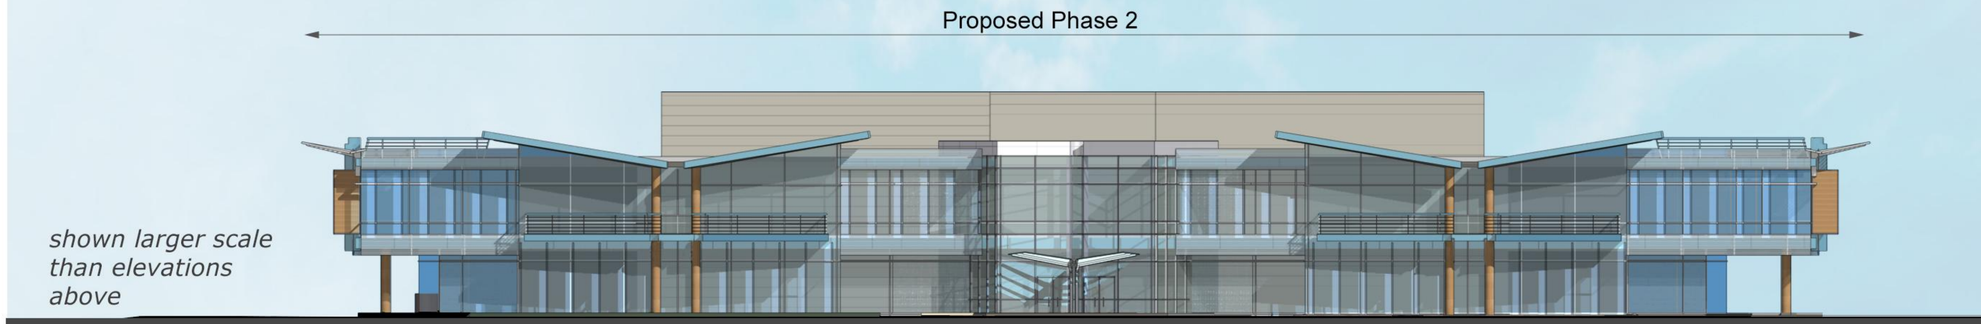


No building element is taller than 35'
other than the mechanical equipment screen (exempt).



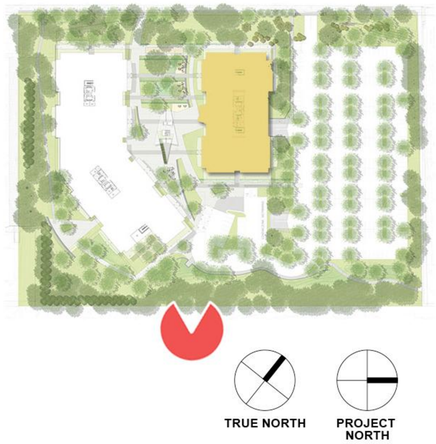
NORTHWEST ELEVATION (both Phases from Hanover)

NORTHEAST ELEVATION (from Lower Parking Area)



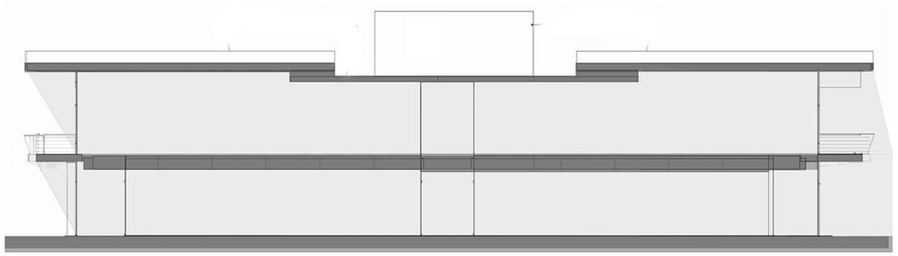
shown larger scale than elevations above

SOUTHWEST ELEVATION (from Courtyard)



SUSTAINABILITY STRATEGY:

The balconies & butterfly roofs on this project effectively shade the glass skin no matter where the sun is. The combination of high efficiency low emissivity clear glass and almost complete shading will control heat gain and provide a highly efficient envelope.



SECTION SHOWING
OVERHANGING ROOF

PRELIMINARY ENERGY MODEL

The preliminary energy model is shown to the right, and the project exceeds the City's requirement of 10%.

PLANTING NOTES

1. PROVIDE MATCHING SIZES AND FORMS FOR EACH SPECIES FOR TREES INSTALLED IN GRID OR SPACED EQUALLY IN ROWS AS SHOWN ON DRAWINGS. ALIGN TREES ACROSS ROADWAYS, DRIVES OR WALKWAYS. ADJUST SPACING AS NECESSARY, SUBJECT TO REVIEW BY THE LANDSCAPE ARCHITECT.
2. PROVIDE MATCHING SIZES AND FORMS FOR ALL HEDGE PLANTINGS. SPACE EQUALLY ON TRIANGULAR OR GRID SPACING AS CALLED FOR ON DETAIL.
3. INSTALL ROOT BARRIER AT ALL TREES LOCATED WITHIN FOUR (4) FEET OF BACK OF CURB, EDGE OF WALL OR PAVING.
4. MARK OFF ALL MAJOR SHRUB AND GROUNDCOVER AREAS ON THE GROUND FOR REVIEW BY LANDSCAPE ARCHITECT PRIOR TO INSTALLING MATERIALS.
5. FORM BERMED WATERING BASIN AROUND ALL TREES INSTALLED IN SHRUB OR GROUNDCOVER AREAS. FILL BASIN WITH WOOD CHIP MULCH AS SHOWN ON DETAIL AND AS SPECIFIED. DO NOT INSTALL BERM AT TREES IN LAWN OR PAVED AREAS.
6. EQUALLY SPACE VINES PLANTED IN ROWS AGAINST WALLS OR FENCES. SEE DRAWINGS FOR QUANTITY AND SPACING. REMOVE ALL VINES FROM NURSERY STAKES AND SPREAD OUT ONTO WALL PRIOR TO ATTACHING TO SURFACE. SIMILARLY ATTACH VINES AT PILASTERS OR POSTS.
7. STAKE OUT LOCATION OF EACH TREE AS SPECIFIED. EACH LOCATION OF ALL TREES SHALL BE ACCEPTED BY LANDSCAPE ARCHITECT PRIOR TO FINAL INSTALLATION.
8. EXACT PLACEMENT FOR ALL HEADERS SHALL BE ACCEPTED BY LANDSCAPE ARCHITECT PRIOR TO FINAL INSTALLATION.
9. COORDINATE WITH IRRIGATION AND LIGHTING CONSULTANTS AS NECESSARY TO ASSURE CORRECT PLACEMENT OF SPRAY HEADS AND LIGHTING AT TREES.
10. PLANT NAMES MAY BE ABBREVIATED ON THE DRAWINGS. SEE PLANT LIST FOR KEY AND CLASSIFICATION.
11. ALL PLANT COUNT QUANITIES ARE SHOWN FOR CONTRACTOR CONVENIENCE ONLY. CONTRACTOR SHALL VERIFY ALL FINAL PLANT COUNTS.

LANDSCAPE LIGHTING NOTES

1. THIS DRAWING IS PROVIDED FOR INFORMATION IN LOCATION OF FIXTURES ON SITE ONLY. REFER TO THE ELECTRICAL ENGINEER'S DRAWINGS FOR ALL EQUIPMENT, TRANSFORMERS, VAULTS, CONDUIT, JUNCTION BOXES, PANEL BOARDS, BREAKERS AND SCHEDULES.
2. ALL POLE– AND RISER–MOUNTED LIGHTING SHALL BE INSTALLED PLUMB. ALL WALL–MOUNTED LIGHT FIXTURES SHALL BE INSTALLED HORIZONTALLY REGARDLESS OF SLOPE OF ADJACENT WALLS OR SURFACES.
3. COORDINATE INSTALLATION OF TREE UPLIGHTS WITH TREE PLANTING WORK UNDER THE PLANTING SECTION. ALL TREE UPLIGHTS SHALL BE ADJUSTED AS DIRECTED BY THE LANDSCAPE ARCHITECT.
4. LIGHTING MEANT TO BE INSTALLED WITHIN THE TREE CANOPY OR UPON THE TRUNK SHALL BE ATTACHED IN A MANNER SO AS NOT TO CAUSE DAMAGE TO THE TREE AND NOT INHIBIT PLANT GROWTH. SEE DETAILS.

LANDSCAPE FINE GRADING NOTES

I. VERIFY ELEVATIONS OF ALL EXISTING BUILDINGS, WALLS, DRAINS, ROADS AND CURBS EFFECTING LANDSCAPE SCOPE OF WORK WITH RELEVANT ARCHITECTURAL AND ENGINEERING DRAWINGS PRIOR TO COMMENCING SITE WORK.
2. VERIFY LOCATION OF ALL DRAINS, MANHOLES, CONDUIT AND PIPING WITH THE ENGINEER'S DRAWINGS.
3. HOLD FENCES, POSTS, AND TOPS OF WALLS LEVEL UNLESS INDICATED OTHERWISE. HOLD ALL PATH POSTS PLUMB REGARDLESS OF ADJACENT SLOPES.
4. PROVIDE SMOOTH EVEN TRANSITIONS BETWEEN SLOPES AND RELATIVELY LEVEL AREAS. MAINTAIN UNIFORM PLANES OF GRADING WITH LOW SPOTS OR LOCALIZED MOUNDS UNLESS CALLED FOR ON DRAWINGS. ROUND OFF TOPS AND TOES OF SLOPES.
5. GRADES NOT OTHERWISE INDICATED SHALL BE UNIFORM LEVELS OR SLOPES BETWEEN SPOT ELEVATIONS GIVEN.
6. ALL GRADES DISTURBED DURING INSTALLATION OF IRRIGATION LINES AND EQUIPMENT SHALL BE RESTORED PRIOR TO COMMENCEMENT OF PLANTING OPERATIONS.
7. ALL GRADED AREAS SHALL BE TRUE TO GRADE WITHIN ONE INCH WHEN TESTED WITH A 10–FOOT STRAIGHT EDGE.
8. ALL WORK PERFORMED WITHIN THE DRIP LINE OF TREES DESIGNATED "EXISTING TREES TO REMAIN" SHALL BE HAND LABOR. SEE LAYOUT PLAN AND SPECIFICATIONS FOR RESTRICTIONS.

LANDSCAPE LAYOUT NOTES

1. VERIFY LOCATION OF ALL BUILDINGS, WALLS, ROADS AND CURBS AFFECTING LANDSCAPE SCOPE OF WORK WITH RELEVANT ARCHITECTURAL AND ENGINEERING DRAWINGS PRIOR TO COMMENCING SITE WORK. UNLESS OTHERWISE NOTED, PROVIDE 2% SLOPE AWAY FROM BUILDING IN PLANTING AND PAVED AREAS.
2. VERIFY LOCATION OF ALL VAULTS, ELECTRICAL DUCT BANKS, MANHOLES, CONDUIT AND PIPING, DRAINAGE STRUCTURES, LIGHTING AND OTHER UTILITIES WITH THE APPROPRIATE ENGINEER'S DRAWINGS.
3. WHERE NOT SHOWN ON LANDSCAPE DRAWINGS, SEE CIVIL ENGINEER'S DRAWINGS FOR ROADWAY CENTERLINE, STATION POINTS, BENCH MARKS AND BUILDING SETBACKS.
4. TAKE ALL DIMENSIONS FROM FACE OF CURB, WALL OR BUILDING OR TO CENTERLINE OF BUILDING COLUMNS OR TREES UNLESS OTHERWISE NOTED.
5. ALL DIMENSIONS CALLED OUT AS "EQUAL" SHALL BE EQUAL DISTANT MEASUREMENTS BETWEEN THE TWO REFERENCE POINTS SHOWN.
6. ALL ANGLES SHALL BE 90 DEGREES AND ALL LINES OF PAVING AND FENCING SHALL BE HELD PARALLEL UNLESS OTHERWISE NOTED ON THE DRAWINGS. MAINTAIN HORIZONTAL ALIGNMENT FOR ALL ADJACENT ELEMENTS SO REFERENCED ON THE DRAWINGS.
7. ALL ITEMS DESIGNATED AS "SIMILAR" OR "TYPICAL" SHALL BE CONSTRUCTED IN THE MANNER OF THE DETAIL REFERENCED, WITH MINOR ADJUSTMENT FOR SPECIFIC CONDITION.
8. WRITTEN DIMENSIONS TAKE PRECEDENCE OVER SCALE APPARENT ON DRAWINGS. DO NOT SCALE FROM DRAWINGS. SEE ENLARGED PLANS AND SPECIFIC DETAILS FOR ADDITIONAL INFORMATION.
9. INDIVIDUAL NOTES AND DETAILS ON SPECIFIC DRAWINGS TAKE PRECEDENCE OVER GENERAL NOTES AND GENERIC DETAILS.
10. ALL WORK PERFORMED WITHIN THE DRIP LINE OF TREES DESIGNATED AS "EXISTING TREES TO REMAIN" SHALL BE HAND LABOR. NO ROOTS OVER ONE INCH IN CALIPER SHALL BE SEVERED WITHOUT REVIEW AND ACCEPTANCE BY LANDSCAPE ARCHITECT OR ARBORIST.
11. ALL CONCRETE SLABS, RAMPS, STAIRS OR FOOTINGS SHALL BE DOWELED INTO ABUTTING WALLS, FOUNDATIONS OR FOOTINGS USING BARS OF THE SAME SIZE AND SPACING UNLESS NOTED OTHERWISE. SEE JOINTING DETAILS. PROVIDE CONTINUOUS EXPANSION JOINT AT ALL DOWELED CONNECTIONS.

Google Image of Bike Path through Site

IESNA recommends light level average for bike paths with residential adjacency to be .5FC AVG. We recommend a uniformity ratio of 4:1 for visual comfort and safety.

The intent is for sufficient continuous illumination that permits bicyclists to see each other as well as the path, and the occassional pedestrian. The recommendation advises that fixture should have minimal distracting glare.

Pole mounted or bollards are both common and acceptable applications for bike path illuminance. We are recommending approx 4'-0" bollard, and have included 2 manufacturer options for competetive pricing.

The City may have a standard product that is recommended for city bike paths. This will need to be explored with the city, as well as any other lighting standards that apply to this usage.

Bike Path Lighting Recommendations

3223 Hanover
Palo Alto, California

2018.03.01

Revision Number:0

Prepared by: Illume/ME

Bollard application

Using a 180 degree beam distribution that focuses light on the pathway, and a 4'-0" height bollard, we recommend this application for low level, consistent horizontal illumination with sufficient vertical illumination for visual recognition. Spacing is 15'-0", alternating sides of pathway for most even illumination.

Pole application

Poles tend to be more expensive, have limitations in product selection based on light distribution needed to control spill light as well as glare (shorter poles and potential glare more visible), and may have more visual impact. Paths shared extensively with pedestrians may benefit, however, and if this is the case then this application can be further studied.

Tree Protection - It's Part of the Plan!

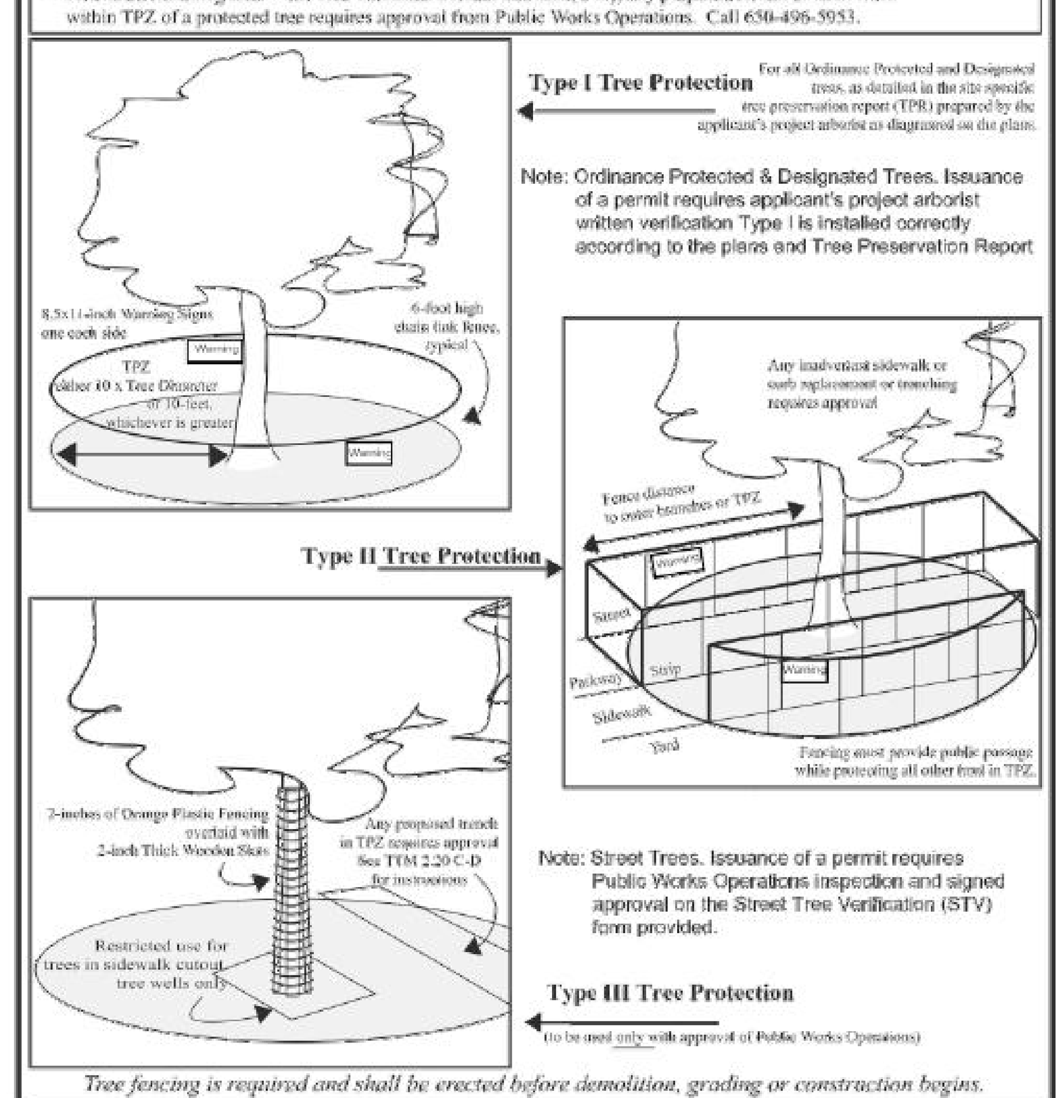
Make sure your crews and subs do the job right!

Fenced enclosures around trees are essential to protect them by keeping the foliage canopy and branching structure clear from contact by equipment, materials and activities, preserving roots and soil conditions in an intact and non-compacted state, and identifying the Tree Protection Zone (TPZ) in which no soil disturbance is permitted and activities are restricted, unless otherwise approved. **An approved tree protection report must be added to this sheet when project activity occurs within the TPZ of a regulated tree.**
For detailed information on Palo Alto's regulated trees and protection during development, review the **City Tree Technical Manual** (TTM) found at www.cityofpaloalto.org/trees/.

TREE DISCLOSURE STATEMENT — CITY OF PALO ALTO, Planning Division, 250 Hamilton Avenue, Palo Alto, CA 94301

PROPERTY ADDRESS: 3223 Hanover Street, Palo Alto, CA 94301

FOR STAFF USE:



Tree fencing is required and shall be erected before demolition, grading or construction begins.

TABLE OF CONTENTS

EXHIBITS

1.0 INTRODUCTION

Steep Slope Property, LLC has retained me to prepare this *Tree Survey Report* in connection with the future redevelopment of **3251 Hanover Street**, Palo Alto. Specific tasks assigned to execute are as follows:

- Visit the site to identify **316 trees** within or immediately adjacent to the project site, and have at least one trunk with a diameter 2four inches at 54 inches above grade. Site visits were performed on 10/5/15, 11/5/15, 11/6/15 and 11/11/15.
- Measure each tree's trunk diameter pursuant to the City's *Tree Technical Manual*[1] and the *Guide for Plant Appraisal, 9th Edition*.[2] Diameters are rounded to the nearest inch, and trees listed with more than one are formed by multiple trunks.
- Estimate each tree's average canopy spread (rounded to the nearest fifth).
- Ascertain each tree's health and structural integrity, and assign an overall condition rating (e.g. good, fair, poor or dead).
- Determine each tree's suitability for preservation (e.g. high, moderate or low).
- Assign numbers in a sequential pattern from #1 thru 316, and affix metal tags with corresponding numbers the trunks, major limbs or adjacent fencing of trees #1-53, 57-58 and 75-307.[3] Tags within the grouping of #1 thru 300 are round with engraved numbers, and of those, the following 14 trees were inaccessible and nailed to the wood fence adjacent to their trunks: #225-228, 237-240, 244, 245, 252, 253, 261 and 262. Tags for trees #301 thru 316 are rectangular aluminum with handwritten numbers, and of those, #310 thru 316 are tied to chain link adjacent to their trunks.
- Show the roughly approximate group or specific locations on the aerial map in Exhibit B (aerial derived from *Google Earth*, imagery date of 3/28/15). Identify trees defined as regulated by the Palo Alto Municipal Code (PAMC).
- Review an ALTA survey by BKF, dated 3/12/15, to identify property lines.
- Provide general design guidelines to help avoid or mitigate impacts to retained trees.
- Prepare a written report that presents the aforementioned information, and submit via email as a PDF document.

1 Available for viewing at www.cityofpaloalto.org/civicax/filebank/blobdload.asp?BlobID=6456.
2 Authored by the Council of Tree & Landscape Appraisers, and published by the International Society of Arboriculture (ISA).
3 Trees not assigned numbers are groupings situated on the property within heavily gated areas.

2.0 TREE COUNT AND COMPOSITION

Three-hundred sixteen (316) trees of 33 various species were inventoried for this report. They are sequentially numbered **as 1 thru 316**, and the table below (and continued on the following page) identifies their names, assigned numbers, counts and overall percentages.

NAME	TREE NUMBER(S)	COUNT	% OF TOTAL
Aleppo pine	12, 14, 19, 20	4	1%
Almond	148	1	0%
American sweetgum	8-10, 17, 18, 24, 25, 66, 67, 86, 248, 250	12	4%
Blackwood acacia	6, 26, 152-156, 177, 241-243, 251-254, 255, 257, 269-271, 274	31	10%
Blue Atlas cedar	7, 256, 265	3	1%
Canary Island pine	272, 273	2	1%
Carob tree	29, 70-74	6	2%
Catalina ironwood	85	1	0%
Chinese flame tree	209, 210	2	1%
Chinese pistache	1, 2, 161, 302, 303	5	2%
Coast live oak	3-5, 21, 36, 43, 45, 57-59, 59, 133, 135, 141, 142, 145, 150-160, 169-175, 179-182, 184-190, 201, 203, 204, 208, 211, 213-220, 222-227, 236, 240, 244, 301, 310, 313-316	92	29%
Crape myrtle	75-77, 79-81, 83-85, 90-92, 94-99, 101-103, 105-110, 112-114, 116-124, 126-128	45	14%
Deodar cedar	44, 46, 47, 48, 178, 183, 258, 262, 286-290, 292, 294-300	19	6%
European olive tree	61-64, 200, 205-207, 275-277, 283-287, 304-307	20	6%

Table continued:

NAME	TREE NUMBER(S)	COUNT	% OF TOTAL
Evergreen pear	249, 268	2	1%
Firethorn	137	1	0%
Flowering pear	176	1	0%
Glossy privet	27, 33, 34, 131, 134, 138, 139, 143, 144, 212, 309	11	3%
Holly oak	11, 28, 30-32, 35, 37, 38, 51, 53, 130, 132, 133, 140, 147	15	5%
Holly juniper	22, 23	2	1%
Interior live oak	202, 238	2	1%
Italian oak	39-42	4	1%
Italian stone pine	278-281	4	1%
Japanese loquat	13	1	0%
Japanese maple	54-56	3	1%
Lemonwood tree	15, 16, 52	3	1%
London plane tree	78, 82, 89, 93, 100, 104, 111, 115, 125	9	3%
Monterey pine	311	1	0%
Peruvian pepper tree	305, 312	2	1%
Red gum	245-247	3	1%
Spotted gum	167, 168	2	1%
Strawberry tree	49, 50, 221	3	1%
Valley oak	33, 60, 148, 149	4	1%
	Total	**316**	**100%**

Specific information regarding each tree is presented within the table in **Exhibit A**, and the trees' assigned **numbers** and approximate **locations** can be viewed on the aerial map in **Exhibit B**.

Due to security restrictions of Lockheed Martin, I was unauthorized to take **photographs** during my site visit, but can be provided at a later date.

As illustrated in the above table, the site is populated predominantly by coast live oak, crape myrtle and Blackwood acacia.

A summary of the **trees' locations** is as follows:

- **#1 thru 53** are along the site frontage, #1 thru 48 in front of the existing building, and #49 thru 53 in front of the existing parking lot.
- **#54 thru 56** are Japanese maples situated within a gated area at the mid-rear of the existing building.
- **#57 thru 74** are along the existing building's northeast side, between the existing parking lot and building. Trees #69 thru 74 are within a gated area at the eastern building corner.
- **#75 thru 128** are crape myrtles and London planes populating the entire parking lot area.
- **#129 thru 265, 308 and 309** align the wide planter areas northeast and southeast of the parking lot and rear drive aisle.
- **#266 thru 307** are along the wide, northeast facing slope immediately southwest of the existing building.
- **#310 thru 316** originate from the southeast side of existing fence, setback from the fence to the extent I could not reach their trunks. Of these, the trunks of #310 and 311 are offsite and originate from neighboring properties, and the others are close or possibly span the property line (survey dependent).
- **#11, 16, 26, 39-42, 51-53** have trunks situated within the public right-of-way along Hanover **Street**, and are regulated by PAMC as **street trees**. Of these, #39 thru 42 are within planters between the sidewalk and street, and all others are southeast of the walk.

3.0 REGULATED TREES

The PAMC **regulates** specific types of trees on public and private property for the purpose of avoiding their removal or disfigurement without first being reviewed and permitted by the City. Three categories within the status of **regulated trees** include **protected trees** (PAMC 8.10), **street trees** (PAMC 8.04.020), and **designated trees**. Additional information regarding "regulated" trees can be viewed on page xiii of the City's *Tree Technical Manual*.

Fifty (50) trees are defined as **protected trees** due to being a either a coast live oak or valley oak with measured trunk diameters ≥11.5 inches; they include **#3-5, 21, 43, 46, 59, 148-150, 152-160, 171, 180, 181, 187, 196, 197, 199, 211, 213-216, 222-228, 232-237, 240, 244, 310, 313, 315 and 316.**

As previously mentioned, **#11, 16, 26, 39-42, 51-53** are situated within the public right-of-way and defined as **street trees.**

The **designated tree** category may apply to a select number of existing trees planted on a commercial or planned development site, either for designated landscape or mitigation for tree removal. This category can be enacted by the City and applied to any specific tree associated with a proposed development project. In the event the City qualifies a specific tree to this category, it may become provisioned to be saved and protected.

4.0 SUITABILITY FOR TREE PRESERVATION

Each tree has been assigned either a "high," "moderate" or "low" suitability for preservation rating as a means to cumulatively measure its existing health, structural integrity, anticipated life span, location, size, particular species, tolerance to construction impacts, growing space, and safety to property and persons within striking distance. Descriptions of these ratings are presented below; the high category is comprised of **29 trees** (or 9%), the moderate category **180** (or 57%), and the low category **107** (or 34%).

High: Applies to **trees #4, 8, 31, 36, 39-43, 46, 48, 89, 68, 183, 184, 160, 171, 180, 196, 211, 213, 235, 236, 244, 292, 298, 298, 301 and 316.**
These trees appear healthy and seemingly structurally stable; have no apparent, significant health issues or structural defects; present a high potential for contributing long-term to the site; and require only periodic or regular care and monitoring to maintain their longevity and structural integrity. Trees assigned this rating are typically the most suitable for retaining and incorporating into the future landscape.

Moderate: Applies to **trees #1-3, 6, 7, 10-12, 14-18, 20, 24-28, 30, 32, 35, 44, 47, 49, 50-58, 60, 61, 65, 70, 75-128, 135, 141, 147-152, 155-159, 161, 169, 170, 172-175, 177, 181, 182, 187, 189-191, 193, 194, 197, 199, 204-206, 214-220, 222-227, 229, 230, 232-234, 237-240, 246, 248, 252, 253, 259, 265, 270, 272, 275, 276, 280-282, 284, 288-290, 296, 297, 299, 302, 303, 310, 312, 314 and 315.**
These trees contribute to the site, but at levels less than those assigned a good suitability; may have health and/or structural issues that may or may not be reasonably addressed and properly mitigated; and frequent care is typically required for their remaining lifespans. These trees might be worth retaining, if provided proper care, but not seemingly at significant expense or major design revisions.

Project Data
3223 HANOVER STREET
Palo Alto, California

T-2

All other tree-related reports shall be added to the space provided on this sheet (adding as needed)

Special Tree Protection Instruction Sheet
City of Palo Alto

T-2

City of Palo Alto

Tree Protection - It's Part of the Plan!

Make sure your crews and subs do the job right!

Fenced enclosures around trees are essential to protect them by keeping the foliage canopy and branching structure clear from contact by equipment, materials and activities, preserving roots and soil conditions in an intact and non-compacted state, and identifying the Tree Protection Zone (TPZ) in which no soil disturbance is permitted and activities are restricted, unless otherwise approved. **An approved tree protection report must be added to this sheet when project activity occurs within the TPZ of a regulated tree.**
For detailed information on Palo Alto's regulated trees and protection during development, review the **City Tree Technical Manual** (TTM) found at www.cityofpaloalto.org/trees/.

Low Applies to **trees 88, 13, 19, 22, 23, 29, 31, 33, 34, 37, 38, 45, 62-64, 66, 67, 69, 71-74, 129-134, 136-140, 142-146, 162-168, 176, 178, 179, 183-186, 188, 192, 195, 198, 200, 209, 210, 212, 221, 229, 231, 241-243, 245, 247, 249-251, 254-258, 260-264, 266-269, 271, 273, 274, 277-279, 283, 285-287, 291, 293, 294, 300, 304-309, 311 and 313.**
These trees are either dead, nearly dead, or have serious or significantly weakened health and/or structural issues expected to worsen regardless of tree care measures employed (i.e. beyond likely recovery). Removing these trees is recommended regardless of future development. Note that of these, #228 has fallen over, and the following 15 are dead or nearly dead: #66, 67, 143, 146, 162-166, 178, 183, 210 and 241-243.

5.0 GENERAL DESIGN GUIDELINES

Recommendations presented within this section serve as general design guidelines to help mitigate or avoid impacts to trees being retained and achieve conformance with City requirements. They are subject to revision upon reviewing the project plans, and I should be consulted in the event any cannot be feasibly implemented. Please note that all referenced **distances from trunks** are intended to be from the closest edge (face of) of their outermost perimeter at soil grade.

1. The **Tree Protection Zone (TPZ)** is where all trenching, soil scraping, compaction, mass grading (cuts and fill), finish-grading, overexcavation, subexcavation, swales, bioswales, storm drains, equipment cleaning, stockpiling and dumping of materials, and equipment/vehicle operation shall be avoided. For general design purposes, **the TPZ** of a particular tree should be a minimum distance from its trunk of **five to seven times its diameter** (strive towards ten times the diameter, and/or, beyond the actual canopy); for trees with multiple trunks, the diameter of the largest one would only be considered. Where an impact encroaches slightly within a setback, it can be reviewed on a case-by-case basis to determine appropriate mitigation measures. As the design progresses, I recommend continuing my involvement to identify appropriate TPZs for trees (as they may require setbacks greater or slightly less than the five to seven times the diameter guideline).

2. **TPZs** for **protected trees** within the wide planter aligning the **parking lot** perimeter should be beyond the trees' canopies, and **all grading, trenching, compaction, subexcavation and shoring** should remain at least **36 inches** away from existing curbs delineating the existing parking lot and drive aisle.

3. The design of future buildings and/or parking garages should consider the **retention of major limbs** (such as those four plus inches in diameter). In doing so, sufficient space is needed to construct a building, including shoring, erecting construction scaffolding, installing roofs, and exterior finishing. In some instances, pruning and/or tying back

branches may be a viable option for certain trees, but would need to be reviewed on a case-by-case basis.

4. **Shoring** shall be implemented to avoid soil disturbance within a TPZ. All shoring should be specified on the appropriate plan and provided for review. Where beneath a tree's canopy, soil nailing (versus using a pile driver) may be required to avoid conflicting with a tree's canopy. Where near a tree's canopy, any overexcavation or soil disturbance be needed beyond the walls (towards the tree's trunk), must be confined to a maximum of 36 inches.

5. The project design should consider all **soil disturbance** (e.g. overexcavation, subexcavation, grading, compaction and trenching) beyond a feature to be built within or near a TPZ shall be **reduced** to the maximum extent possible in the direction of a tree's trunk. In no instance should disturbance exceed **12 inches** for a curb, gutter, walkway or pier, or **24 inches** for retaining walls, foundations and concrete pads.

6. Trees inventoried for this report should be **shown on all site-related plans** (e.g. architectural site, demolition, grading and drainage, utilities and landscape). Information to show includes their assigned numbers; trunk diameters (shown as a circle to-scale); trunk locations; and canopy dimensions (where trees are densely grouped together, dimensions could be combined). As the design progresses, detailed dimensions of specific canopies (e.g. on-site survey versus aerial dimensions) may become required. For trees being retained, the civil plans should reflect their **surveyed trunk location** and **vertical ground elevations** (at least for those originating on-site).

7. Any **walkways, driveways and sections of drive aisle** proposed within a TPZ should be designed to be entirely on top of existing soil grade (including curb/gutter, base materials, edging and forms); if a vertical soil cut is necessary, the location and depth should be reviewed with me beforehand. Additionally, direct compaction of the existing soil surface or subgrade must be avoided (foot-tamping is acceptable), and any soil fill used to bevel the top of a walk or drive to existing grade should not exceed

beyond 12 to 24 inches from the landscape edge. Tensar® Biaxial **Geogrid** (*www.tensarcorp.com*) can be considered to help achieve these specifications.

8. All **existing, unused lines or pipes** within a TPZ shall be **abandoned** and cut off at existing soil grade (rather than being dug up and causing subsequent root damage); this provision should be specified on applicable plans (e.g. demolition plan).

9. The permanent and temporary **drainage design**, including downspouts, should not require water being discharged with TPZs. Additionally, the **drainage design** shall not require trenching within a TPZ, and **new bioswales** must be established *well beyond* a tree's canopy.

10. **Underground utilities and services** should be routed **beyond TPZs**. Where this is not feasible, the section of line(s) within the TPZ should be directionally-bored by at least four feet below existing grade, or installed by other means (e.g. pipe-bursting) to avoid an open trench; the ground above any tunnel must remain undisturbed, and access pits and any above-ground infrastructure (e.g. splice boxes, meters and vaults) must be established beyond all TPZs.

11. To restrict spoils and runoff from traveling into root zones, the future **erosion control design** should establish any silt fence and/or straw rolls uphill away from a tree trunk (not against it), and as close to the canopy edge as possible. Additionally, where within a TPZ, the material should require none or a maximum vertical soil cut of two inches for its embedment.

12. The future **staging area** and **route(s) of access** should be shown on the final site plan and avoided on unpaved areas beneath or near canopies.

13. The proposed **landscape design** should conform to the following additional guidelines:
    a. **Large growing trees**, such as those that can exceed the height of retained trees, should be installed beyond TPZs, and at least 10 to 15 feet from a future foundation, wall and landscape.

b. **Plant material** installed beneath the canopies of the oaks and cedars must be drought-tolerant, limited in amount, and planted at least five or more feet from their trunks. Plant material installed beneath the canopies of all other trees should be at least 36 inches from their trunks.
c. **Irrigation** can, overtime, adversely impact the oaks and should be avoided. Irrigation for any new plant material beneath their canopies should be low-volume, applied irregularly (such as only once or twice per week), and temporary (such as no more than three years). For cedars, irrigation during non-winter months (warm months may help improve their current condition.
d. **Irrigation** should not be applied within six inches from the trunks of existing trees being irrigated, and not applied against the trunks of new trees.
e. **Irrigation and lighting features** (e.g. main line, lateral lines, valve boxes, wiring and controllers) should be established so that no trenching occurs within a TPZ. In the event this is not feasible, they may require being installed in a radial direction to a tree's trunk, and terminate a specific distance from a trunk (versus crossing past it). Should this not be possible, the work may need to be performed using a pneumatic air device (such as an Air-Spade®) to avoid root damage. Any Netafim tubing used should be placed on grade, and header lines installed as mentioned above.
f. **New fencing** (posts) should be placed at least two feet from a tree's trunk (depends on the trunk size and growth pattern).
g. **Ground cover** beneath canopies should be comprised of a three- to four-inch layer of coarse wood chips or other high-quality mulch (gorilla hair, bark or rock, stone, gravel, black plastic or other synthetic ground cover should be avoided). Mulch should not be placed against the trees' trunks.
h. **Tilling, ripping and compaction** within TPZs shall be avoided, as well as applying herbicides within a TPZ. I also recommend no liming be specified within 50 feet from a trunk.
i. Border board or other **edging material** proposed beneath the canopies should be established on top of existing soil grade (such as by using vertical stakes).

14. The City will require the project plans are **reviewed** for **tree-related impacts**, and that a ***Tree Protection Report*** is subsequently prepared, essentially a report to address project specific mitigation measures to be implemented during demolition, grading, underground utility installation, construction and landscaping. Plans typically reviewed include the following: site; building elevations; grading and drainage; underground utility; landscaping (layout, planting and irrigation); electrical; plumbing; structural; and mechanical. To achieve a feasible design around trees to be retained, I recommend the plans are submitted to me for review and comment at (or earlier) the 50-percent design development stage, and again at the 50-percent construction document stage.

15. Pursuant to City Ordinance, a copy of the future "**Tree Protection Report**" shall be incorporated into the building permit (or before) plan set; titled Sheets T-1, T-2, etc. (Tree Protection Instructions); and referenced on all site-related plans. Also, the Sheet T-1 template and additional forms required by Palo Alto can be viewed at *http://www.cityofpaloalto.org/gov/depts/pln/planning_review.asp#5, Trees.*

6.0 ASSUMPTIONS AND LIMITING CONDITIONS

- All information presented herein covers only the inventoried trees, and reflects their size, condition, and items viewed from the ground and project site on performed on 10/5/15, 11/5/15, 11/6/15 and 11/11/15.
- Documented condition, suitability ratings and species of dormant trees are subject to change once they can be observed following the growth of new leaves.
- My observations were performed visually without probing, coring, dissecting or excavating. I cannot, in any way, assume responsibility for any defects that could only have been discovered by performing the mentioned services in the specific area(s) where a defect was located.
- The assignment pertains solely to trees listed in Exhibit A. I hold no opinion towards other trees on or surrounding the project area.
- I cannot provide a guarantee or warranty, expressed or implied, that deficiencies or problems of any trees or property in question may not arise in the future.
- No assurance can be offered that if all my recommendations and precautionary measures (verbal or in writing) are accepted and followed, that the desired results may be achieved.
- I cannot guarantee or be responsible for the accuracy of information provided by others.
- I assume no responsibility for the means and methods used by any person or company implementing the recommendations provided in this report.
- The information provided herein represents my opinion. Accordingly, my fee is in no way contingent upon the reporting of a specified finding, conclusion or value.
- The aerial map in Exhibit B is intended to only represent the trees' approximate locations.
- This report is proprietary to me and may not be copied or reproduced in whole or part without prior written consent. It has been prepared for the sole and exclusive use of the parties to who submitted for the purpose of contracting services provided by David L. Babby.
- If any part of this report or copy thereof be lost or altered, the entire evaluation shall be invalid.

TREE INVENTORY TABLE

TREE/ TAG NO.	TREE NAME	TREE SIZE: Trunk Diameter (in.)	TREE SIZE: Canopy Spread (ft.)	TREE CONDITION: Health Condition (100%=Best, 0%=Worst)	TREE CONDITION: Structural Integrity (100%=Best, 0%=Worst)	TREE CONDITION: Overall Condition (Good/Fair/Poor/Dead)	Suitability for Preservation (High/Moderate/Low)	"Protected Tree"	"Street Tree"	Comments
1	Chinese pistache (*Pistacia chinensis*)	9	30	30%	40%	Poor	Moderate			Codominants at 4.5' high. Very sparse canopy. Significant dieback along top. Near top of slope.
2	Chinese pistache (*Pistacia chinensis*)	7	20	60%	70%	Fair	Moderate			Buried root collar. At top of slope. Deadwood. Low-branching beginning at 4' high.
3	Coast live oak (*Quercus agrifolia*)	27	50	40%	40%	Poor	Moderate	X		Sparse canopy declined to advanced levels. Buried root collar along uphill side. Roots severed at top of slope, where ground is level. Surface roots, some being damaged. Trunk is at edge of top of slope. Multiple leaders at 6' high form, several unfavorably forming narrow angles of attachment.
4	Coast live oak (*Quercus agrifolia*)	16	25	60%	60%	Fair	High	X		Buried root collar. Multiple leaders at 6' high.
5	Coast live oak (*Quercus agrifolia*)	19	40	60%	60%	Fair	High	X		Buried root collar. Codominant leaders at 5.5' high, growing towards street. Deadwood.
6	Blackwood acacia (*Acacia melanoxylon*)	10	25	70%	70%	Good	Moderate			
7	Blue Atlas cedar (*Cedrus a.* 'Glauca')	23	10	40%	40%	Poor	Moderate			Multiple leaders at 10' high with very narrow attachments. Sparse canopy. Deadwood.

TREE CONDITION: Health Condition (100%=Best, 0%=Worst)	TREE CONDITION: Structural Integrity (100%=Best, 0%=Worst)	TREE CONDITION: Overall Condition (Good/Fair/Poor/Dead)	Suitability for Preservation (High/Moderate/Low)	"Protected Tree"	"Street Tree"	Comments
15	Lemonwood tree (*Pittosporum eugenioides*)	6, 3	10	50%	40%	Poor	Moderate			Narrow form. Three-foot tall stem wound along 6" trunk.
16	Lemonwood tree (*Pittosporum eugenioides*)	19	20	60%	40%	Fair	Moderate		X	Street tree. Has large surface roots and a girdling root.
17	American sweetgum (*Liquidambar styraciflua*)	5	10	70%	40%	Fair	Moderate			Narrow form. Codominant leaders at 15' high. Old wound near base.
18	American sweetgum (*Liquidambar styraciflua*)	12	30	80%	40%	Fair	Moderate			Multiple leaders form a weak attachment at 17' high. Old wound healed over along lower trunk, resulting in a 3' tall seam.
19	Aleppo pine (*Pinus halepensis*)	21	50	40%	20%	Poor	Low			Severe, highly-pronounced lean towards north. Two alternatives for its disposition: one involves removal, the second is to cut the 11" long northernmost limb back to the upright limb. A supplemental measure, if retained, is to install a pole support following said pruning. Removal should occur regardless of project. Has a chlorotic canopy.
20	Aleppo pine (*Pinus halepensis*)	29	40	60%	50%	Fair	Moderate			Discoloration of trunk at 6' high, east side. Excessive limb weight.
21	Coast live oak (*Quercus agrifolia*)	51	70	90%	60%	Good	High	X		Healthy oak. Codominant leaders at 4' high. Slightly asymmetrical canopy along west side where it grows adjacent to tree #20's. Along the east side, there is a partial girdling root, and a lower section of the trunk is curved out. Existing concrete pad 5' from trunk. A walkway is 2.5' from trunk.

TREE INVENTORY TABLE

TREE/ TAG NO.	TREE NAME	TREE SIZE: Trunk Diameter (in.)	TREE SIZE: Canopy Spread (ft.)	TREE CONDITION: Health Condition (100%=Best, 0%=Worst)	TREE CONDITION: Structural Integrity (100%=Best, 0%=Worst)	TREE CONDITION: Overall Condition (Good/Fair/Poor/Dead)	Suitability for Preservation (High/Moderate/Low)	"Protected Tree"	"Street Tree"	Comments
45	Deodar cedar (*Cedrus deodara*)	18	20	50%	40%	Poor	Low			On slope. Ivy along lower trunk. Trunk sweeps north then vertical. Crowded-growing conditions. Possible broken branch near top.
46	Coast live oak (*Quercus agrifolia*)	24	55	100%	70%	Good	High	X		Asymmetrical canopy away from #45's. Near toe of slope.
47	Deodar cedar (*Cedrus deodara*)	10	20	60%	60%	Fair	Moderate			On slope. Crowded-growing conditions.
48	Deodar cedar (*Cedrus deodara*)	30	70	60%	80%	Fair	High			On slope. Branches encroaching on security light.
49	Strawberry tree (*Arbutus unedo*)	10, 10, 8, 5, 6, 6	35	70%	40%	Fair	Moderate			Canopy conjoined with, and asymmetrical away from, #50. Multi-trunk and low crown. Bowing east.
50	Strawberry tree (*Arbutus unedo*)	16, 14, 9, 4	45	60%	40%	Fair	Moderate			Canopy conjoined with #49's. Sparse top. Partial, very large girdling root around base of 16" trunk. The 16" and 14" trunks are low-branching. Broad form and low crown. Multi-trunk.
51	Holly oak (*Quercus ilex*)	19	40	40%	40%	Poor	Moderate		X	Large roots cut along sidewalk side. Codominant leaders 6' high. Declining canopy.

TREE INVENTORY TABLE

TREE/TAG NO.	TREE NAME	TREE SIZE: Trunk Diameter (in.)	TREE SIZE: Canopy Spread (ft.)	TREE CONDITION: Health Condition (100%=Best, 0%=Worst)	TREE CONDITION: Structural Integrity (100%=Best, 0%=Worst)	TREE CONDITION: Overall Condition (Good/Fair/Poor/Dead)	Suitability for Preservation (High/Moderate/Low)	"Protected Tree"	"Street Tree"	Comments
154	Coast live oak (*Quercus agrifolia*)	22	70	80%	60%	Good	High	X		On slope, uphill side is buried. Conjoined canopy with #153. Asymmetrical canopy.
155	Coast live oak (*Quercus agrifolia*)	15	35	60%	30%	Poor	Moderate	X		Crowded conditions. Bows east.
156	Coast live oak (*Quercus agrifolia*)	18	35	60%	30%	Poor	Moderate	X		Sinuous, funky form. Ivy along trunk. Crowded conditions. Large limbs cut below where multiple leaders originate at 5.5' high.
157	Coast live oak (*Quercus agrifolia*)	24	55	80%	40%	Fair	Moderate	X		Ivy along trunk. On slope. Asymmetrical canopy, codominant leaders at 6' high. Structure is predominantly formed by eastern limb, western-half shorter and encroaches onto adjacent security light.
158	Coast live oak (*Quercus agrifolia*)	19	40	60%	50%	Fair	Moderate	X		Near bottom of slope. Crowded conditions. Ivy along trunk. Codominant leaders at 13' high. Large deadwood. Upright, compressed form between competing canopies.
159	Coast live oak (*Quercus agrifolia*)	21	40	70%	40%	Fair	Moderate	X		On slope. Buried root collar. Ivy along trunk. Crowded conditions between competing canopies. Narrow, sinuous form. Multiple leaders at 8' high.
160	Coast live oak (*Quercus agrifolia*)	27	90	80%	60%	Good	High	X		Very low canopy over parking lot, nearing 3' from grade. Basal decay visible through a hollow on north side. Discolored multiple locations at base. Multiple leaders 6 to 9' high.

TREE CONDITION: Health Condition (100% Best, 0% Worst)	TREE CONDITION: Structural Integrity (100% Best, 0% Worst)	TREE CONDITION: Overall Condition (Good/Fair/Poor/Dead)	Suitability for Preservation (High/Moderate/Low)	*Protected Tree*	*Street Tree*	
195	Red gum (*Eucalyptus camaldulensis*)	32	70	30%	30%	Poor	Low			
Comments: Tag on fence. Offsite. Opposite side of fence, center of trunk 12' from chain link. Very sparse and thin canopy with large deadwood. Meadow lush filled everything up.										
196	Red gum (*Eucalyptus camaldulensis*)	9	10	30%	30%	Fair	Moderate			
Comments: Codominant tops. Slight lean west.										
197	Red gum (*Eucalyptus camaldulensis*)	8, 3	18	30%	30%	Fair	Low			
Comments: Two trunks form a weak attachment. Leans west.										
198	Australian tea tree (*Leptospermum laevigatum*)	11	30	60%	60%	Fair	Moderate			
Comments: Rests on parking against adjacent eucalyptus and causing uneven drainage path.										
199	Evergreen pear (*Pyrus kawakamii*)	5	15	30%	40%	Poor	Low			
Comments: Deadwood, high and asymmetrical canopy. Girdling root, below ground.										
200	Australian tea tree (*Leptospermum laevigatum*)	10	10	30%	40%	Poor	Low			
Comments: Trunk wrapped around trunk. Narrow, weakly attached canopy. Large deadwood.										
201	Blackwood acacia (*Acacia melanoxylon*)	7	20	70%	60%	Fair	Low			
Comments: Multiple tops. Crowded conditions.										
202	Blackwood acacia (*Acacia melanoxylon*)	6	15	70%	70%	Fair	Moderate			
Comments: Tag on fence. Opposite side of fence, center of trunk 6" from chain link. Crowded.

TREE INVENTORY TABLE

TREE/ TAG NO.	TREE NAME	TREE SIZE: Trunk Diameter (in.)	TREE SIZE: Canopy Spread (ft.)	TREE CONDITION: Health Condition (100% Best, 0% Worst)	TREE CONDITION: Structural Integrity (100% Best, 0% Worst)	TREE CONDITION: Overall Condition (Good/Fair/Poor/Dead)	Suitability for Preservation (High/Moderate/Low)	*Protected Tree*	*Street Tree*	
253	Blackwood acacia (*Acacia melanoxylon*)	1, 3	10	50%	50%	Fair	Moderate			
Comments: Tag on fence. Opposite side and base abuts wood fence.										
254	Blackwood acacia (*Acacia melanoxylon*)	13, 9	25	50%	30%	Poor	Low			
Comments: Has a large girdling root. On slope and leans downhill. Deadwood. Large wound along the uphill side of both trunks.										
255	Blackwood acacia (*Acacia melanoxylon*)	9	20	60%	30%	Poor	Low			
Comments: On slope. Codominants at 25' form a weak attachment. Crowded conditions.										
256	Blackwood acacia (*Acacia melanoxylon*)	7	15	60%	30%	Poor	Low			
Comments: On slope. Crowded conditions. Leans downhill.										
257	Blackwood acacia (*Acacia melanoxylon*)	9, 7, 4	20	60%	40%	Fair	Low			
Comments: On slope. Large wound near base of 9" trunk. Crowded conditions.										
258	Blackwood acacia (*Acacia melanoxylon*)	6	10	60%	40%	Fair	Low			
Comments: On slope. Deadwood and crowded conditions.										
259	Blackwood acacia (*Acacia melanoxylon*)	7	15	70%	60%	Fair	Moderate			
Comments: Top of slope. Deadwood.										
260	Blackwood acacia (*Acacia melanoxylon*)	9	25	60%	40%	Fair	Low			
Comments: Codominants forming a weak attachment.										

ARBOR RESOURCES

TREE INVENTORY TABLE

TREE/ TAG NO.	TREE NAME	TREE SIZE: Trunk Diameter (in.)	TREE SIZE: Canopy Spread (ft.)	TREE CONDITION: Health Condition (100% Best, 0% Worst)	TREE CONDITION: Structural Integrity (100% Best, 0% Worst)	TREE CONDITION: Overall Condition (Good/Fair/Poor/Dead)	Suitability for Preservation (High/Moderate/Low)	*Protected Tree*	*Street Tree*	
261	Blackwood acacia (*Acacia melanoxylon*)	7	15	50%	20%	Poor	Low			
Comments: Tag on fence. Opposite side of fence, base adjacent to wood fence. Lower trunk is not visible. Asymmetrical, suppressed growth away from 5269.										
262	Blackwood acacia (*Acacia melanoxylon*)	7	10	60%	40%	Fair	Low			
Comments: Opposite side of fence, trunk nearly abutting chain link. Tagged fence. Codominants at 3' high. Substantial amount of ivy along trunk.										
263	Blackwood acacia (*Acacia melanoxylon*)	9, 9, 7	30	70%	70%	Fair	Low			
Comments: 9" trunks form a very weak attachment. Asymmetrical canopy.										
264	Blackwood acacia (*Acacia melanoxylon*)	9	20	70%	40%	Fair	Low			
Comments: Codominant leaders form a weak attachment.										
265	Deodar cedar (*Cedrus deodara*)	15	30	50%	60%	Fair	Moderate			
Comments: Large dead limbs. Low-crown and sinuous trunk. There is a dead, 10" redwood beside approximately 20' uphill.										
266	Blackwood acacia (*Acacia melanoxylon*)	10, 9	25	70%	70%	Poor	Low			
Comments: Dead limbs within center, top of canopy. Old wounds and history of limb failure.										
267	Blackwood acacia (*Acacia melanoxylon*)	7	10	60%	70%	Poor	Low			
Comments: Large crow wound along low trunk. Highly crowded growing conditions.

TREE INVENTORY TABLE

TREE/ TAG NO.	TREE NAME	TREE SIZE: Trunk Diameter (in.)	TREE SIZE: Canopy Spread (ft.)	TREE CONDITION: Health Condition (100% Best, 0% Worst)	TREE CONDITION: Structural Integrity (100% Best, 0% Worst)	TREE CONDITION: Overall Condition (Good/Fair/Poor/Dead)	Suitability for Preservation (High/Moderate/Low)	*Protected Tree*	*Street Tree*	
268	Evergreen pear (*Pyrus kawakamii*)	10, 8	25	50%	40%	Poor	Low			
Comments: A large limb was cut from trunk sometime ago, leaving a large wound. Asymmetrical canopy and crowded conditions, suppressed below limb of adjacent acacia.										
269	Blackwood acacia (*Acacia melanoxylon*)	4	15	60%	40%	Fair	Low			
Comments: On slope. Crowded-growing conditions. Asymmetrical canopy.										
270	Blackwood acacia (*Acacia melanoxylon*)	7	20	60%	50%	Fair	Moderate			
Comments: On slope.										
271	Blackwood acacia (*Acacia melanoxylon*)	7	15	60%	40%	Fair	Low			
Comments: Crowded conditions. Asymmetrical canopy.										
272	Canary Island pine (*Pinus canariensis*)	24	45	50%	50%	Fair	Moderate			
Comments: On slope. Excessive limb weight. Sinuous trunk. Marginal condition. High canopy.										
273	Canary Island pine (*Pinus canariensis*)	20	40	40%	40%	Poor	Low			
Comments: On slope. Large deadwood and excessive limb weight. High canopy.										
274	Blackwood acacia (*Acacia melanoxylon*)	7	25	50%	60%	Poor	Low			
Comments: Highly siderotic, declining energy. Large wound along low-st trunk.										
275	European olive tree (*Olea europaea*)	18	25	60%	60%	Fair	Moderate			
Comments: Crowded conditions beneath 5276. Multiple leaders 2' high. Deadwood.

City of Palo Alto

Tree Protection - It's Part of the Plan!

Make sure your crews and subs do the job right!

Fenced enclosures around trees are essential to protect them by keeping the foliage canopy and branching structure clear from contact by equipment, materials and activities, preserving roots and soil conditions in an intact and non-compacted state, and identifying the Tree Protection Zone (TPZ) in which no soil disturbance is permitted and activities are restricted, unless otherwise approved. **An approved tree protection report must be added to this sheet when project activity occurs within the TPZ of a regulated tree.**
For detailed information on Palo Alto's regulated trees and protection during development, review the **City Tree Technical Manual** (TTM) found at www.cityofpaloalto.org/trees/.

TREE INVENTORY TABLE

TREE/ TAG NO.	TREE NAME	TREE SIZE: Trunk Diameter (in.)	TREE SIZE: Canopy Spread (ft.)	TREE CONDITION: Health Condition (100% Ideal, 0% Dead)	TREE CONDITION: Structural Integrity (100% Ideal, 0% Failed)	TREE CONDITION: Overall Condition (Good, Fair, Poor, Dead)	Suitability for Preservation (High, Moderate, Low)	*Protected Tree?	*Street Tree?
307	European olive tree (Olea europaea)	11	25	40%	30%	Poor	Low		
	Comments: Multiple leaders at 18" high.								
308	Peruvian pepper tree (Schinus molle)	7	20	50%	30%	Poor	Low		
	Comments: Base grafted to #148 valley oak, which it grows entirely beneath (high snowfall-growing conditions). A prior limb cut.								
309	Glossy privet (Ligustrum lucidum)	5	15	30%	40%	Poor	Low		
	Comments: Adjacent to tree #308.								
310	Coast live oak (Quercus agrifolia)	14, 12	35	50%	40%	Fair	Moderate	X	
	Comments: Offsite. Tag tied to chain link. Center of trunk ~8' from NE property corner. Highly limited visibility of tree. Old stump adjacent to trunks.								
311	Monterey pine (Pinus radiata)	13	25	50%	10%	Poor	Low		
	Comments: Appears offsite. Leans east towards adjacent home. History of large limb failure, and top has been removed; extremely poor remaining structure. Trunk is covered by a 5' tall wood pile. Excessive limb weight and deadwood. Tag tied to chain link.								
312	Peruvian pepper tree (Schinus molle)	8, 6	20	40%	40%	Poor	Moderate		
	Comments: Opposite side of fence, center of trunk ~ 3' from fence. Tag tied to chain link. Leans SE. Ivy along trunk.								
313	Coast live oak (Quercus agrifolia)	22	50	50%	30%	Poor	Low	X	
	Comments: Opposite side of fence; trunk appears to span property line, to center of fence. A massive stem failed years ago, leaving a large, decaying cavity. Multiple tags at 9' high. Tag tied to chain link.

NOTES:

1. STENCIL "NO DUMPING! FLOWS TO BARRON CREEK" LOGO IN BLUE COLOR ON A WHITE BACKGROUND, ADJACENT TO STORM DRAIN INLET. CONTACT THE CITY AT 650.329.2598 FOR STENCILS OF THE LOGO.
2. BIOTREATMENT SOIL MIX
   A. BIOTREATMENT SOIL MIX SHALL CONFORM TO THE SPECIFICATIONS PROVIDED IN ATTACHMENT L OF THE MUNICIPAL REGIONAL STORMWATER PERMIT (WHICH ARE ALSO INCLUDED IN APPENDIX C OF SANTA CLARA VALLEY URBAN RUNOFF POLLUTION PREVENTION PROGRAM'S C.3 HANDBOOK).
   B. ACHIEVE A LONG–TERM, IN–PLACE INFILTRATION RATE OF AT LEAST 5 INCHES PER HOUR.
   C. SUPPORT VIGOROUS PLANT GROWTH.
   D. CONSIST OF THE FOLLOWING MIXTURE OF FINE SAND AND COMPOST, MEASURED ON A VOLUME BASIS:
      60%–70% SAND
      30%–40% COMPOST
3. COMPACTION OF THE UNDERLYING SOILS BELOW THE BIORETENTION AREA SHOULD BE AVOIDED.
4. PLANTING FOR BIORETENTION AREAS SHALL BE DROUGHT TOLERANT PLANTS AND CONFORM TO THE PLANT LIST PROVIDED IN APPENDIX D OF SANTA CLARA VALLEY URBAN RUNOFF POLLUTION PREVENTION PROGRAM'S C.3 HANDBOOK.
5. A 3RD PARTY INSPECTION OF THE BIORETENTION PONDS WILL BE REQUIRED DURING INSTALLATION AND PRIOR TO OCCUPANCY. CONTACT 3RD PARTY INSPECTOR PRIOR TO THE PLACEMENT OF BIORETENTION SOIL.

LIST OF POTENTIAL POLLUTANTS:

1. LITTER
2. MOTOR OIL
3. GASOLINE
4. HYDROCARBONS
5. HEAVY METALS
6. PESTICIDES

PRE VS. POST-CONSTRUCTION FLOW CALCULATIONS:

Q = CIA (RATIONAL METHOD, DRAINAGE MANUAL 2007, COUNTY OF SANTA CLARA, CALIFORNIA)

Q = FLOW IN CUBIC FEET PER SECOND (CFS)
C = RUNOFF COEFFICIENT (0.9 FOR IMPERVIOUS AND 0.3 FOR PERVIOUS)
I = DESIGN STORM INTENSITY IN INCHES PER HOUR (IN/HR)
A = DRAINAGE AREA IN ACRES

PRE-CONSTRUCTION FLOW

IMPERVIOUS AREA = 271,945 SF
PERVIOUS AREA = 171,044 SF
C = 0.67 (WEIGHTED FOR OVERALL DRAINAGE AREA)
I = 2.2 IN/HR (10–YR DESIGN STORM, 10 MIN. DURATION PER FIGURE B–5)
A = 10.17 ACRES

Q = (0.67) (2.2) (10.17)
Q = 14.99 CFS

POST-CONSTRUCTION FLOW (PHASE 1)

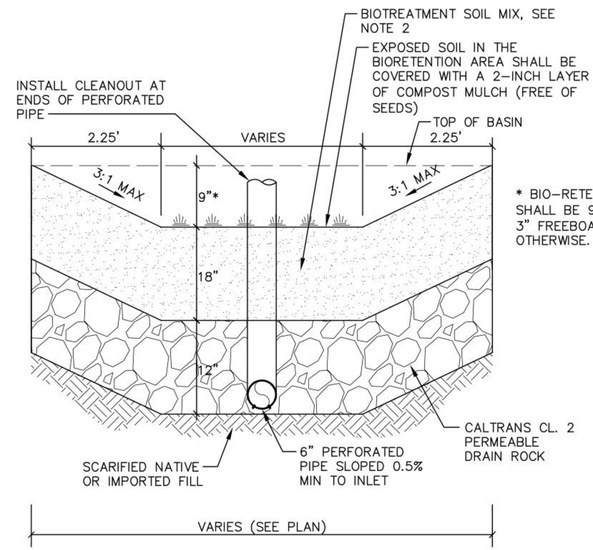
IMPERVIOUS AREA = 160,101 SF
PERVIOUS AREA = 282,888 SF
C = 0.52 (WEIGHTED FOR OVERALL DRAINAGE AREA)
I = 2.2 IN/HR (10–YR DESIGN STORM, 10 MIN. DURATION PER FIGURE B–5)
A = 10.17 ACRES

Q = (0.52) (2.2) (10.17)
Q = 11.63 CFS

POST-CONSTRUCTION FLOW (PHASE 2)

IMPERVIOUS AREA = 256,932 SF
PERVIOUS AREA = 186,057 SF
C = 0.65 (WEIGHTED FOR OVERALL DRAINAGE AREA)
I = 2.2 IN/HR (10–YR DESIGN STORM, 10 MIN. DURATION PER FIGURE B–5)
A = 10.17 ACRES

Q = (0.65) (2.2) (10.17)
Q = 14.49 CFS



BACKFILL BIORETENTION ONLY WITH PERMEABLE PLANTING MATERIAL AND DRAIN ROCK AS SPECIFIED IN THIS DETAIL. ABSOLUTELY NO NATIVE MATERIAL SHALL BE USED FOR BACKFILL.
