

FAR CALCULATION

SIZE OF LOT: 110,432 SQUARE FEET (SF)
NOTE THAT PURSUANT TO THE ZONING CODE, ALLOWABLE FLOOR AREA RATIO (FAR) IS 0.4:1 FOR THE DEALERSHIP AND ADDITIONAL 0.25:1 FOR THE SHWROOM SPACE

ALLOWED:
0.40:1 = 44,173 SF ALLOWED
0.29:1 = 32,025 SF ALLOWED

PROPOSED:
1ST FLOOR SF (EXCLUDING SERVICE DRIVE): 25,480 SF 2ND FLOOR SF: 5,715 SF
TRASH ENCLOSURE: 381 SF = TOTAL AREA: 31,195 SF

SERVICE DRIVE (THIS IS THE ONLY EXCLUDED SF ON THE SITE): 4,499 SF
TOTAL SQUARE FOOTAGE OF DEALERSHIP (EVERYTHING BUT SERVICE DRIVE AND SHOWROOM):
27,098 SF TOTAL SQUARE FOOTAGE OF SHOWROOM: 4,097 SF

TOTAL SQUARE FOOTAGE OF BUILDING FOOTPRINT PLUS TRASH ENCLOSURE
(THIS IS FOR THE MAX LOT COVERAGE): 35,694 SF

*SEE SHEET 04 FOR AREA DIAGRAMS

PROJECT SUMMARY

THIS PROJECT ENTAILS THE CONSTRUCTION OF A NEW AUTOMOTIVE DEALERSHIP WITH A SERVICE FACILITY. THE BUILDING HAS A PARAPET OF 26'-0" AND A PYLON TOWER OF 36'-0". EXTERIOR CLADDING OF THE PROPOSED FACILITY WILL CONSIST OF GLAZING, ACM PANELS, RIBBED METAL PANELS, RECLAIMED WOOD SIDING, STUCCO, AND A LANDSCAPE WALL.

THE REAR OF THE SITE CONTAINS A DRIVEWAY ALLOWING ACCESS FROM THE PROPOSED MERCEDES-BENZ DEALERSHIP TO THE EXISTING AUDI DEALERSHIP NEXT DOOR.

THIS BUILDING HAS MIXED OCCUPANCY CLASSES OF B, S-1, AND S-2.

PARKING CALCULATIONS

CUSTOMER PARKING REQUIRED - 1 SPACE PER 400 SF OF SALES, SERVICE, AND OFFICE ADMINISTRATION. 1 SPACE PER 500 SF OF EXTERIOR DISPLAY

TOTAL SALES, SERVICES AND OFFICE AREA = 31,195 SF / 400 = 78 SPACES
TOTAL EXTERIOR DISPLAY = 3,078 SF / 500 = 6.16 SPACES
TOTAL CUSTOMER PARKING = 85 SPACES
TOTAL INVENTORY PARKING = 42 SPACES
TOTAL DISPLAY PARKING = 19
TOTAL PARKING = 146 SPACES
BICYCLE PARKING (PAMC 18.52.040 TABLE 1) = 1 SPACE PER 10 EMPLOYEES, 40 EMPLOYEES = 4 BIKE SPACES
2 LOADING SPACES = 12' X 45'

EV CHARGING STATIONS = (PAMC 16.14430 SECTION A5.106.5.3.5) REQUIRES
86 SPACES * 5% = 5 EV CHARGERS (2 DUAL MOUNT AND 1 SINGLE).

EXISTING SITE SUMMARY

NOTES:

1. THE EASEMENT AREA, TRANSFORMER AND OTHER UTILITY LINES WILL BE SHOWN WHEN THE UTILITY LINES ARE DESIGNED AND APPROVED BY CITY. AS PART OF THE CONSTRUCTION DOCUMENTS.
2. LOCATION OF ELECTRIC METERS WILL BE SHOWN AS PART OF THE CONSTRUCTION DOCUMENT. AT THIS TIME WE DO NOT HAVE FINAL DESIGN YET.

NOTES:

(A) 4 BIKE RACKS, SEE ARCHITECTURAL PLANS.

(B) 5 EV CHARGING STATIONS, SEE ARCHITECTURAL PLANS.

(C) THE ENCLOSURE WILL BE SHARED WITH THE NEIGHBORING BUILDING, 1730 EMBARCADERO RD. IF THE TWO LOCATIONS ARE SHARING, THEN THE APPLICANT MUST PROVIDE A COVERED REFUSE ENCLOSURE LARGE ENOUGH TO HOUSE FOUR – 4CY BINS. APPLICANT IS REQUIRED TO FOLLOW THE "REFUSE ENCLOSURE GUIDELINES" AND THE "ENCLOSURE DESIGN GUIDE" WHEN DESIGNING AND BUILDING THE REFUSE ENCLOSURE.

PALO ALTO SANTA CLARA COUNTY CALIFORNIA

SHEET C-5.1 OF

PROJECT 20-2518

DEMOLITION NOTES:

1. THE CONTRACTOR SHALL CAREFULLY AND THOROUGHLY EXAMINE THE PLANS AND THE SITE TO OBTAIN FIRST-HAND KNOWLEDGE OF EXISTING CONDITIONS PRIOR TO COMMENCEMENT OF BIDDING.

2. THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE PROTECTION AND SAFETY OF PROPERTY AND PERSONS AFFECTED AS A RESULT OF THIS WORK. SAFETY MEASURES SUCH AS BARRICADES, FLAGMEN, SIGNS AND OTHER SUITABLE WARNING DEVICES SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR TO ASSURE THE SAFETY OF THE PUBLIC, PEDESTRIANS AND EMPLOYEES (INCLUDING PERSONS EMPLOYED BY THE CONTRACTOR) AT ALL TIMES DURING THE COURSE OF CONSTRUCTION (DURING WORKING AND NON-WORKING HOURS).

3. THE CONTRACTOR SHALL BE RESPONSIBLE FOR JOB SITE CONDITIONS AND THE SAFETY OF PROPERTY AND PERSONS AT ALL TIMES THROUGHOUT THE CONTRACT PERIOD. THE CONTRACTOR SHALL HOLD HARMLESS AND DEFEND THE OWNER, ENGINEER AND THEIR ASSIGNS EMPLOYEES OR AGENTS FROM ANY AND ALL CLAIMS, REAL OR ALLEGED, ARISING OUT OF THE PERFORMANCE OF THE WORK, EXCEPT IN THE CASE OF SOLE NEGLIGENCE OF THE OWNER, ENGINEERS AND THEIR ASSIGNS, EMPLOYEES OR AGENTS.

4. THE CONTRACTOR SHALL PERFORM HIS/HER WORK IN A MANNER TO RESULT IN MINIMUM INCONVENIENCE TO THE TRAFFIC, PEDESTRIANS AND THE OPERATION OF THE EXISTING ORCHARD STORE AT ALL TIMES DURING THE CONSTRUCTION.

5. EXISTING TREES, ROOTS, CONCRETE AND PAVEMENT SHALL BE REMOVED FROM THE SITE, INCLUDING ANY DEBRIS OR RUBBISH GENERATED FROM DEMOLITION.

6. UNDERGROUND STRUCTURES AND OTHERS, WHERE THEY EXIST ON THE SITE, MUST BE TOTALLY REMOVED INCLUDING ALL FIELD DRAINS AND CONNECTED LINES, UNDER THE OBSERVATION OF THE GEOTECHNICAL ENGINEER, UNLESS OTHERWISE NOTED. A PORTION OF THE EXISTING SANITARY SEWER AND WATER LINE TO REMAIN. SEE THE DEMOLITION PLAN. DEPRESSIONS LEFT FROM ANY REMOVAL SHALL BE PROPERLY FILLED AND COMPACTED IN ACCORDANCE WITH THESE SPECIFICATIONS.

7. IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO DETERMINE THE EXISTENCE AND LOCATION OF ALL UNDERGROUND UTILITIES. ALL FACILITIES SHOWN REPRESENT THE BEST INFORMATION AVAILABLE TO ams associates, inc. AT THE TIME OF PREPARATION OF THESE PLANS. NO GUARANTEES ARE MADE AS TO THE ACCURACY OF THIS INFORMATION. THE CONTRACTOR IS TO CALL USA UNDERGROUND SERVICE ALERT AT (800) 227-2600 OR 811 FOR INFORMATION REGARDING THE LOCATIONS OF THE UTILITIES AND STORM DRAIN LINES PRIOR TO DEMOLITION.

8. LAWFUL DISPOSAL OF ALL EXCESS MATERIAL OFF THE PROPERTY.

9. OBTAINMENT OF ANY PERMITS REQUIRED BY LOCAL AGENCIES SHALL BE THE CONTRACTOR'S RESPONSIBILITY.

10. ANY DAMAGE TO UTILITY UNDERGROUND FACILITIES SHALL BE REPAIRED BY THE CONTRACTOR AT NO COST TO THE OWNER.

11. THE CONTRACTOR SHALL NOT ALLOW RUBBLE TO ACCUMULATE ON THE PROPERTY. TEMPORARY STORAGE SHALL BE PERMITTED FOR CONTRACTOR'S CONVENIENCE. THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE SAFETY THEREOF.

12. UTILITY ABANDONMENT/REMOVAL: DISCONNECT AND CAP PIPES AND SERVICES TO REMAIN.

13. NOTIFY THE OWNER'S REPRESENTATIVE AND ENGINEER IMMEDIATELY OF ANY UTILITIES ENCOUNTERED THAT ARE NOT SHOWN ON THE DRAWINGS. PRESERVE AND REPAIR ANY UTILITIES THAT ARE DAMAGED AND THAT ARE TO REMAIN.

14. TREES WHICH ARE MARKED SHALL BE REMOVED. THE EXISTING TREES OUTSIDE OF THE DEMOLITION LIMITS SHALL BE PROTECTED PER THE CITY OF PALO ALTO'S STANDARDS AND SPECIFICATIONS.

15. THE CONTRACTOR SHALL STAGE AND FENCE THEIR OPERATIONS AS NOTED IN THIS PLAN. THE STAGING AREA SHALL BE DETERMINED BY THE CONTRACTOR. THE STAGING LOCATION SHALL BE APPROVED BY THE OWNER.

16. ALL CONSTRUCTION TRAFFIC TO AND FROM THE SITE SHALL OCCUR ALONG THE "HAUL ROUTE" AS DIRECTED BY THE CITY. THE CONTRACTOR IS TO COORDINATE WITH THE CITY PRIOR TO THE START OF WORK.

17. THE CONTRACTOR SHALL PROTECT ALL EXISTING IMPROVEMENTS ON THE CITY'S RIGHT-OF-WAY AND COORDINATE THEIR WORK WITH THE CITY IN A MANNER THAT MINIMIZES ANY DAMAGE OR DISRUPTIONS TO THE ADJACENT PROPERTIES AND THE CITY'S RIGHT-OF-WAY OPERATION'S AND TRAFFIC.

18. ALL WORK SHALL BE COMPLETED CONSISTENT WITH THE PLANS, SPECIFICATIONS, BID AND CONTRACT DOCUMENTS.

19. THE CONTRACTOR MUST IMMEDIATELY NOTIFY THE CITY OF PALO ALTO'S FIRE DEPARTMENT HAZARDOUS MATERIALS UNIT OF ANY UNDERGROUND PIPES, TANKS, OR STRUCTURES; ANY SUSPECTED OR ACTUAL CONTAMINATED SOILS; OR ANY OTHER ENVIRONMENTAL LIABILITIES ENCOUNTERED DURING SITE CLEARANCE ACTIVITIES. ANY CONFIRMED ENVIRONMENTAL LIABILITIES WILL NEED TO BE REMEDIED PRIOR TO PROCEEDING WITH FURTHER SITE CLEARANCE/DEMOLITION.

20. PERSONNEL OPERATING THE CONSTRUCTION SITE SHALL HAVE A MEANS OF COMMUNICATING AND REPORTING A FIRE OR MEDICAL EMERGENCY. THIS REQUIREMENT MAY BE MET BY USE OF A CELLULAR TELEPHONE FOR DIALING 911. CELLULAR TELEPHONE CALLS TO 911 NOW REPORT TO THE CLOSEST PUBLIC SERVICE ANSWERING POINT TO THE PROJECT SITE; IN THIS CASE, THE PALO ALTO POLICE DEPARTMENT.

21. THE CONTRACTOR SHALL COMPLY WITH THE PROVISIONS OF THE PERMITS REQUIRED FROM ANY STATE OR REGIONAL AGENCIES, INCLUDING BUT NOT LIMITED TO, THE BAY AREA AIR QUALITY MANAGEMENT DISTRICT (BAAQMD), REGIONAL WATER QUALITY CONTROL BOARD (RWQCB), CITY OF PALO ALTO AND THE SANTA CLARA COUNTY DEPARTMENT OF ENVIRONMENTAL HEALTH.

22. THE CONTRACTOR IS TO NOTIFY THE WATER AGENCY, SANITARY SEWER DISTRICT AND THE CITY OF PALO ALTO 72 HOURS PRIOR TO THE START OF DEMOLITION.

23. THE CONTRACTOR IS TO NOTIFY CITY OF PALO ALTO, PG&E, TELEPHONE AND CABLE TELEVISION COMPANIES 72 HOURS PRIOR TO THE START OF DEMOLITION.

N.T.S.

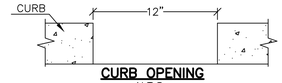

CONSTRUCTION NOTES

1. SCARIFY SUBGRADE BEFORE INSTALLING BIORETENTION AREA AGGREGATE AND BSM.
2. FACILITY EXCAVATION TO ALLOW FOR SPECIFIED SOIL AND MULCH DEPTHS TO ACHIEVE FINISHED ELEVATIONS ON CIVIL PLANS.
3. INSTALL UNDERDRAIN WITH HOLES FACING DOWN. UNDERDRAIN DISCHARGE ELEVATION SHALL BE NEAR TOP OF AGGREGATE LAYER. UNDERDRAIN SLOPE MAY BE FLAT.
4. DO NOT WORK WITHIN BIORETENTION AREA DURING RAIN OR UNDER WET CONDITIONS.
5. KEEP HEAVY MACHINERY OUTSIDE BIORETENTION AREA LIMITS.
6. ALL MULCH IN BIORETENTION CELLS SHOULD BE 2–3 INCHES OF COMPOSTED, NON–FLOATABLE MATERIAL IN AREAS BETWEEN PLANTINGS.
7. THE BIO–RETENTION MEDIA SHALL BE 65% SAND OF VOLUME, 20% SANDY LOAM BY VOLUME (ITS SELF NO MORE THAT 10% MAX BY WEIGHT PF SILT AND 3% BY WEIGHT OF CLAY), AND 15% BY VOLUME AS COMPOST. THE PRODUCT TAG SHALL BE PROVIDED TO THE CONSTRUCTION INSPECTOR PRIOR TO PLACEMENT.
8. CONTRACTOR TO TEST THE INFILTRATION RATE OF THE BIO RETENTION MEDIA AND PROVIDE THE TEST REPORT TO THE CONSTRUCTION INSPECTOR PRIOR TO INSTALLATION. BIO RETENTION INFILTRATION IS TO BE NO LESS THAN 5 INCHES PER HOUR.

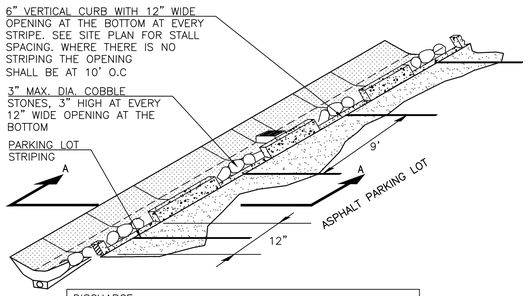

OPTIONAL MOUNDING PARAMETERS:
PLANTING MOUNDS CONSTRUCTED OF BSM MAY BE PROVIDED SUBJECT TO APPROVAL. TOP OF MOUNDS AT LEAST 2" BELOW CREST OF OVERFLOW RISER, LOW POINTS NO MORE THAN 12" BELOW CREST OF OVERFLOW RISER

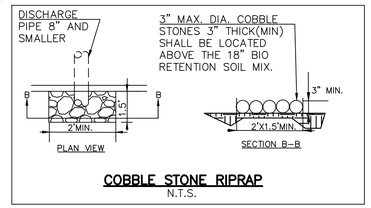

1. NO LINER, NO FILTER FABRIC, NO LANDSCAPE CLOTH BETWEEN BSM AND AGGREGATE.
2. MAINTAIN BGL. TGL, TSL THROUGHOUT FACILITY AREA AT ELEVATIONS TO BE SPECIFIED IN PLAN.
3. CLASS 2 PERMEABLE MATERIAL LAYER MAY EXTEND BELOW AND UNDERNEATH INLET.
4. ELEVATION OF UNDERDRAIN DISCHARGE IS AT TOP OF GRAVEL LAYER.

OVERALL LANDSCAPE PLAN

LANDSCAPE CONCEPT PLAN FOR:

Mercedes-Benz of Palo Alto

Swickard Auto Group

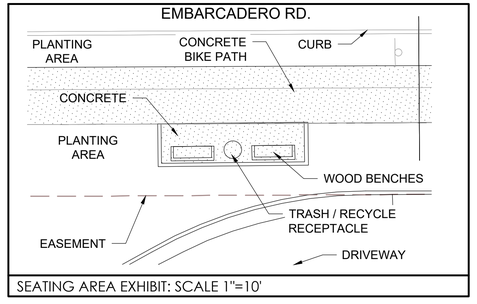

DESIGN STATEMENT:

THE LANDSCAPE DESIGN FOR THIS PROJECT WILL TAKE THE BAYLANDS NATURAL PRESERVE STYLE AND INTERTWINE THE MODERN LOOK OF THE MERCEDES BRAND.

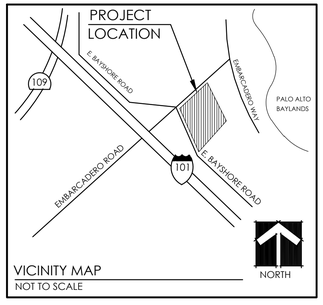

THE LANDSCAPE SURROUNDING THE BUILDING WILL BE DESIGNED TO FRAME THE WINDOWS, PROVIDE ACCENTS AT FOCAL AREAS, AND ADDRESS ALL SIDES OF THE BUILDING.

REFER TO THE GRADING PLANS FOR DRAINAGE AND WATER QUALITY INFORMATION

IRRIGATION STATEMENT:
THE IRRIGATION SYSTEM WILL BE DESIGNED TO COMPLY WITH THE WATER CONSERVATION LANDSCAPE ORDINANCE. THE EQUIPMENT SHALL UTILIZE THE MOST UP TO DATE WATER CONSERVATION METHODS INCLUDING, DRIP IRRIGATION AND AN ET WEATHER MONITORING CONTROLLER.

[a] Hydrozone #/Planting Description
E.g.
1.) front lawn
2.) low water use plantings
3.) medium water use planting

[b] Irrigation Method — *overhead spray or drip*

[c] Irrigation Efficiency — *0.75 for spray head; 0.81 for drip*

WATER EFFICIENT LANDSCAPE WORKSHEET

Eto x 0.62 x ETAF x Area

Where 0.62 is a conversion factor that converts acre-inches per acre per year to gallons per square foot per year.

eMAWA (Annual Gallons Allowed) =
(Eto) (0.62) [(ETAF x LA) + ((1-ETAF) x SLA)]

Where 0.62 is a conversion factor that converts acre-inches per acre per year to gallons per square foot per year, LA is the total landscape area in square feet, SLA is the total special landscape area in square feet, and ETAF is .55 for residential areas and 0.45 for non-residential areas.

ETAF Calculations

Regular Landscape Areas

Total ETAF x Area	8470.74
Total Area	23232.00
Average ETAF	**0.36**

All Landscape Areas

Total ETAF x Area	8470.74
Total Area	23232.00
Sitewide ETAF	**0.36**

Average ETAF for Regular Landscape Areas must be 0.55 or below for residential areas, and 0.45 or below for non-residential areas.

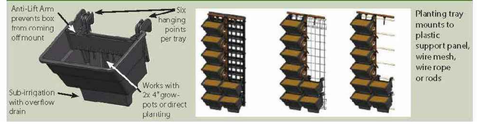

VGP® Hanging Wall System

Versatile, Easy-to-Install Planting System for Interior and Exterior Use

Few living wall systems offer the versatility of the VGP hanging wall. At the heart of the system is the VGP planting tray. Made of 100% recycled polypropylene, it fits either two plants in 4" nursery pots for interior applications, or a direct planted pot for the exteriors. It can be hung on the VGP recycled mounting panel, standard 2"x 3" welded mesh, or along rods or steel rope. Each tray incorporates an anti-lift arm to prevent removal, but requires no other bolts or clips. The trays can be hung at 6" or 9" vertical intervals, depending on the plant size and the project budget.
The VGP is designed with a sub-irrigation reservoir using simple felt wicking, and incorporates an overflow drain that can be direct plumbed or cascade to a central drainage point. Drip irrigation and fertilizer dosing is recommended, but not required.

- Range of mounting options allows for living walls at a variety of price points
- Water-efficient sub-irrigation reservoir means healthy, low maintenance plants
- Interior and exterior solution for applications large and small
- Both tray and molded support panel are 100% post-consumer recycled plastic

VGP Hanging Wall Products

Part No.	Overall Part Size	Nominal Part Size	Description	Empty Weight
VGP-01	7-5/8"W x 8-1/8"H x 7-1/2"D	7-7/8"W x 6"H x 7-5/8"D	Planting Tray, black recycled polypropylene. Planting volume 110 cu. in. or .47 gal	1 lbs
VGP-1636	16-1/2"W x 36-3/8"H x 7/8"D	15-3/4"W x 35-1/2"H x 7/8"D	Mounting Panel, black recycled polypropylene. Fits 12 pots (close spacing) or 8 pots (expanded spacing)	2 lbs.

Specification Details

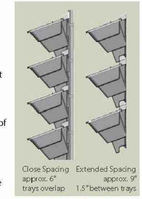

Approx. Planting Weight:
Close Spacing (2 trays psf) - 19 lbs/sq. ft
Extended Spacing (1.5 trays psf) - 12.7 lbs/sq. ft

Irrigation lines can be run between the trays, attached to the mounting panel or the 2"x3" mesh. Individual irrigation lines run to the back of each tray. The bottom of the tray serves as a sub-irrigation reservoir.

Overflow drains to the tray below, behind the baffle plate. Alternately, drain plugs are available if required.

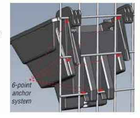

Interior applications will typically use two 4" plants in their nursery pots per tray, with capillary wicks running from pot to the tray reservoir.

Exterior applications will typically use flats or plugs directly planted into the tray.

Close Spacing approx. 6" trays overlap

Extended Spacing approx. 9" 1.5" between trays

Overflow Drain
Drains to tray below - May be plumbed or plugged as required

City of Palo Alto

Tree Protection - It's Part of the Plan!

Make sure your crews and subs do the job right!

Fenced enclosures around trees are essential to protect them by keeping the foliage canopy and branching structure clear from contact by equipment, materials and activities, preserving roots and soil conditions in an intact and non-compacted state, and identifying the Tree Protection Zone (TPZ) in which no soil disturbance is permitted and activities are restricted, unless otherwise approved. **An approved tree protection report must be added to this sheet when project activity occurs within the TPZ of a regulated tree.**
For detailed information on Palo Alto's regulated trees and protection during development, review the **City Tree Technical Manual** (TTM) found at www.cityofpaloalto.org/trees/.

TREE DISCLOSURE STATEMENT

CITY OF PALO ALTO
Planning Division, 250 Hamilton Avenue
Palo Alto, CA 94301
(650) 329-2441
http://www.cityofpaloalto.org

Palo Alto Municipal Code, Chapter 8.10.040, requires disclosure and protection of certain trees located on private and public property, and that they be shown on submitted and approved site plans. A completed tree disclosure statement must accompany all permit applications that include exterior work, all demolition or grading permit applications, or other development activity.

PROPERTY ADDRESS: 1700 Embarcadero Road

Are there Regulated[1] trees on or adjacent to the property? (YES) NO (If no, proceed to Section 4)

[Sections 1- 4 MUST be completed by the applicant. Please circle and/or check where applicable.]

1. Where are the trees? Check those that apply. **(Plans must be submitted showing all trees over 4" diameter)**
   - ☑ On the property
   - ☑ On adjacent property overhanging the project site
   - ☐ In the City planter strip or right-of-way easement within 30' of property line (Street Trees)*

*Street trees **require special protection by a fenced enclosure**, per the attached instructions. Prior to receiving any permit, you must provide an authorized Street Tree Protection Verification form. Contact Public Works Operations at (650) 496-5953 for inspection of type I, II or III fencing (see attached Detail #603) required for all street trees.

2. Are there any Protected[1] or Designated[1] Trees? (YES) (Check where applicable) NO
   - ☑ Protected Tree (s)
   - ☐ Designated Tree (s)
   - ☑ On or overhanging the property

3. Is there activity or grading within the dripline? (radius 10 times the trunk diameter) of these trees? (YES) NO
*If Yes, a **Tree Preservation Report** must be prepared by an ISA certified arborist and submitted for staff review (see TTM, Section 6.25). Attach this report to Sheet T-1,'Tree Protection, as Part of the Plan'", per Site Plan Requirements.*

4. Are the Site Plan Requirements** completed? YES (NO)

**Trees, Protection of Regulated trees during development require the following: (1) Plans must show the measured trunk diameter and canopy dripline; (2) Plans must denote, as a bold dashed line, a fenced enclosure area out to the dripline, per Sheet T-1 and Detail #605 - http://www.cityofpaloalto.org/trees/forms.htm (See also TTM , Section 2.15 for area to be fenced)

I, the undersigned, agree to the conditions of this disclosure. I understand that knowingly or negligently providing false or misleading information in response to this disclosure requirement constitutes a violation of the Palo Alto Municipal Code Section 8.10.040, which can lead to criminal and/or civil legal action.

Signature: _____ Print: _____ Date: _____
(Prop. Owner or Agent)

FOR STAFF USE:

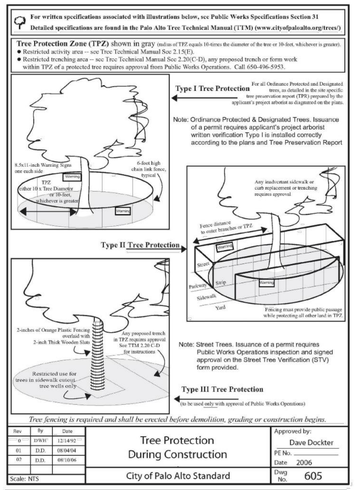

Protective Fencing
Sections 5-6 must be **completed by staff** for the issuance of any development permit (demolition, grading or building permit).

5. Protected Trees. The specified tree fencing is in place. A written statement is attached verifying that protective fencing is correctly in place around protected and/or designated trees. YES NO
(N/A if there are no protected trees, check here ☐)

6. Street Trees. A signed Public Works Street Tree Protection Verification form is attached. YES NO
(N/A if there are no street trees, check here ☐).

[1] Regulated Trees – a) Street trees – trees on public property; b) Protected trees – Coast Live Oaks or Valley Oaks which are 11.5" in diameter or larger, Coast Redwoods which are 18" in diameter or larger, when measured 54" above natural grade, and Heritage trees are trees designated by City Council; and c) Designated Trees – commercial or non-residential property trees, which are part of an approved landscape plan.
Palo Alto Tree Technical Manual (TTM) contains instructions for all requirements on this form, available at www.cityofpaloalto.org/trees/technical-manual.html

S:\PLANS\FALCON\Advance Planning\Arborist\Tree Program Information\Tree Disclosure Statement\TDS07\Tree Disclosure Statement Final_2007.doc Revised 03/04/07

For written specifications associated with illustrations below, see Public Works Specifications Section 31
Detailed specifications are found in the Palo Alto Tree Technical Manual (TTM) (www.cityofpaloalto.org/trees/)

Tree Protection Zone (TPZ) shown in gray (radius of TPZ equals 10 times the diameter of the tree or 10-feet, whichever is greater).
- Restricted activity area – see Tree Technical Manual Sec 2.15(E).
- Restricted trenching area – see Tree Technical Manual Sec 2.20(C-D), any proposed trench or form work within TPZ of a protected tree requires approval from Public Works Operations. Call 650-496-5953.

Type I Tree Protection For all Ordinance Protected and Designated trees, as detailed in the site specific tree preservation report (TPR) prepared by the applicant's project arborist as diagnosed on the plans.

Note: Ordinance Protected & Designated Trees. Issuance of a permit requires applicant's project arborist written verification Type I is installed correctly according to the plans and Tree Preservation Report.

8.5x11-inch Warning Signs one each side of fence

TPZ (the greater of 10 x Tree Diameter or 10-feet) Arborist to give direction

6-foot high chain link fence, mounted on posts driven into ground

Any inadvertent sidewalk or curb replacement or trenching requires approval

Fence distance to outer branches or TPZ

Mulch

Native Soil

Pavement

Sidewalk

Yard

Fencing must provide public passage while protecting all other land in TPZ

Type II Tree Protection

3-inches of Orange Plastic Fencing overlaid with 2-inch Thick Wooden Slats

TPZ proposed trench or TPZ requires approval See TTM 2.20 C-D. for instructions

Restricted use for trees in sidewalk cutouts — tree wells only

Note: Street Trees. Issuance of a permit requires Public Works Operations inspection and signed approval on the Street Tree Verification (STV) form provided.

Type III Tree Protection
(to be used only with approval of Public Works Operations)

Tree fencing is required and shall be erected before demolition, grading or construction begins.

Tree Protection During Construction

Approved by: Dave Dockter
PE No.
Date 2006
Dwg No. 605

Scale: NTS

City of Palo Alto Standard

APPENDIX J

PALO ALTO
STREET TREE PROTECTION INSTRUCTIONS
--SECTION 31--

31-1 General

a. **Tree protection has three primary functions.** 1) to keep the foliage canopy and branching structure clear from contact by equipment, materials and activities; 2) to preserve roots and soil conditions in an intact and non-compacted state and 3) to identify the Tree Protection Zone (**TPZ**) in which no soil disturbance is permitted and activities are restricted, unless otherwise approved.

b. **The Tree Protection Zone (TPZ)** is a restricted area around the base of the tree with a radius of ten-times the diameter of the tree's trunk or ten feet; whichever is greater, enclosed by fencing.

31-2 Reference Documents

a. **Detail 605** – Illustration of situations described below.

b. **Tree Technical Manual (TTM) Forms** (http://www.cityofpaloalto.org/trees/)
1. Trenching Restriction Zones (TTM, Section 2.20E.9)
2. Arborist Reporting Protocol (TTM, Section 6.30)
3. Site Plan Requirements (TTM, Section 6.35)
4. Tree Disclosure Statement (TTM, Appendix J)

c. **Street Tree Verification (STV) Form** (http://www.cityofpaloalto.org/trees/forms)

31-3 Execution

a. **Type I Tree Protection:** The fence shall enclose the *entire* TPZ of the tree(s) to be protected throughout the life of the construction project. In some parking areas, if fencing is located on paving or concrete that will not be demolished, then the posts may be supported by an appropriate grade level concrete base, if approved by Public Works Operations.

b. **Type II Tree Protection:** For trees situated within a planting strip, only the planting strip and yard side of the TPZ shall be enclosed with the required chain link protective fencing in order to keep the sidewalk and street open for public use.

c. **Type III Tree Protection:** To be used only with approval of Public Works Operations. Trees situated in a tree well or sidewalk planter pit, shall be wrapped with 2-inches of orange plastic fencing form the ground to the first branch and overlaid with 2-inch thick wooden slats bound securely (slats shall not be allowed to dig into the bark). During installation of the plastic fencing, caution shall be used to avoid damaging any branches. Major limbs may also require plastic fencing as directed by the City Arborist.

d. **Size, type and area to be fenced.** All trees to be protected shall be protected with six (6') foot high chain link fences. Fences are to be mounted on two-inch diameter galvanized iron posts, driven into the ground to a depth of at least 2-feet at no more than 10-foot spacing. Fencing shall extend to the outer branching, unless specifically approved on the STV Form.

e. **'Warning' signs.** A warning sign shall be weather proof and prominently displayed on each fence at 20-foot intervals. The sign shall be minimum 8.5-inches x 11-inches and clearly state in half inch tall letters: "WARNING - Tree Protection Zone - This fence shall not be removed and is subject to a fine according to PAMC Section 8.10.110."

f. **Duration**. Tree fencing shall be erected before demolition, grading or construction begins and remain in place until final inspection of the project, except for work specifically allowed in the TPZ. Work or soil disturbance in the TPZ requires approval by the project arborist or City Arborist (in the case of work around Street Trees). Excavations within the public right of way require a Street Work Permit from Public Works.

g. **During construction**

1. All neighbors' trees that overhang the project site shall be protected from impact of any kind.
2. The applicant shall be responsible for the repair or replacement plus penalty of any publicly owned trees that are damaged during the course of construction, pursuant to Section 8.04.070 of the Palo Alto Municipal Code.
3. The following tree preservation measures apply to all trees to be retained:
   a. No storage of material, topsoil, vehicles or equipment shall be permitted within the TPZ.
   b. The ground under and around the tree canopy area shall not be altered.
   c. Trees to be retained shall be irrigated, aerated and maintained as necessary to ensure survival.

END OF SECTION

City of Palo Alto 2004 Standard Drawings and Specifications
Street Tree Verification of Protection, PWE, Section 31 Revised 08/06

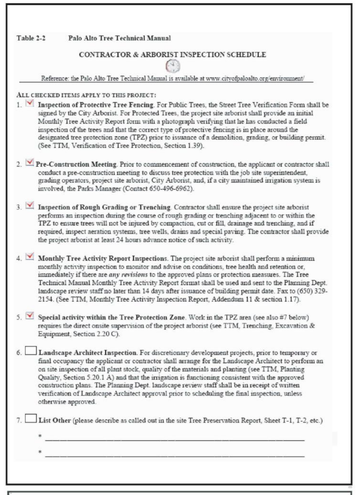

Table 2-2 Palo Alto Tree Technical Manual

CONTRACTOR & ARBORIST INSPECTION SCHEDULE

Reference: the Palo Alto Tree Technical Manual is available at www.cityofpaloalto.org/environment/

ALL CHECKED ITEMS APPLY TO THIS PROJECT:

1. ☑ **Inspection of Protective Tree Fencing**. For Public Trees, the Street Tree Verification Form shall be signed by the City Arborist. For Protected Trees, the project site arborist shall provide an initial Monthly Tree Activity Report form with a photograph verifying that he has conducted a field inspection of the trees and that the correct type of protective fencing is in place around the designated tree protection zone (TPZ) prior to issuance of a demolition, grading, or building permit. (See TTM, Verification of Tree Protection, Section 1.39).

2. ☑ **Pre-Construction Meeting**. Prior to commencement of construction, the applicant or contractor shall conduct a pre-construction meeting to discuss tree protection with the job site superintendent, grading operators, project site arborist, City Arborist, and, if a city maintained irrigation system is involved, the Parks Manager (Contact 650-496-6962).

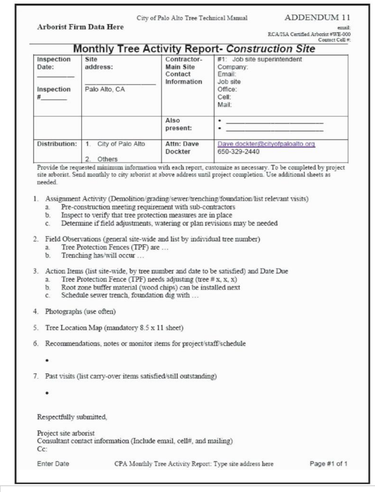

3. ☑ **Inspection of Rough Grading or Trenching**. Contractor shall ensure the project site arborist performs an inspection during the course of rough grading or trenching adjacent to or within the TPZ to ensure trees will not be injured by compaction, cut or fill, drainage and trenching, and if required, inspect neretion systems, tree wells, drains and special paving. The contractor shall provide the project arborist at least 24 hours advance notice of such activity.

4. ☑ **Monthly Tree Activity Report Inspections**. The project site arborist shall perform a minimum monthly activity inspection to monitor and advise on conditions, tree health and retention or, immediately if there are any revisions to the approved plans or protection measures. The Tree Technical Manual Monthly Tree Activity Report format shall be used and sent to the Planning Dept. landscape review staff no later than 14 days after issuance of building permit date. Fax to (650) 329-2154. (See TTM, Monthly Tree Activity Inspection Report, Addendum 11 & section 1.17).

5. ☑ **Special activity within the Tree Protection Zone**. Work in the TPZ area (see also #7 below) requires the direct onsite supervision of the project arborist (see TTM, Trenching, Excavation & Equipment, Section 2.20 C).

6. ☐ **Landscape Architect Inspection.** For discretionary development projects, prior to temporary or final occupancy the applicant or contractor shall arrange for the Landscape Architect to perform an on site inspection of all plant stock, quality of the materials and planting (see TTM, Planting Quality, Section 5.20.1.A) and that the irrigation is functioning consistent with the approved construction plans. The Planning Dept. landscape reviewr staff shall be in receipt of written verification of Landscape Architect approval prior to scheduling the final inspection, unless otherwise approved.

7. ☐ **List Other** (please describe as called out in the site Tree Preservation Report, Sheet T-1, T-2, etc.)

Summary

The site is located at the corner of East Bayshore Road and Embarcadero Road in Palo Alto. There is an old restaurant building centrally located on the property. The site is now used to house Audi vehicles throughout the parking lot.

The inventory consists of 63 trees comprised of 13 different species and includes those directly adjacent. Forty-one percent are Chinese elms with twenty-six specimens on the site. Thirteen trees, ten Chinese elms (*Ulmus parvifolia*) and three privets (*Ligustrum lucidum*), are protected street trees. Eleven additional eucalyptus (*Eucalyptus spp.*) are located on adjacent to the site requiring protection.

Thirty-nine trees are in fair condition and seventeen are in poor shape. Six are in good condition and one pine (*Pinus radiata*) is dead.

Thirty-four trees have poor suitability for preservation including all the crape myrtles (*Lagerstroemia indica*) and Chinese elms around the interior. Among the poorly suited trees are three protected privet street trees along Embarcadero Road. These three street trees are in poor condition and are considered an invasive species. Considerations for removal and replacement should be made for the three privet.

Thirty-eight trees will be highly affected by the project and will need to be removed. None of these 38 are protected by the ordinance. Thirteen trees will be moderately influenced which are all the eucalyptus along the adjacent southern sites and Chinese elm number 1 near utility hookups. All the moderately affected trees are protected. Twelve trees are not expected to impacted including all the protected street trees with the exception of Chinese elm number 1.

The street trees will require Type E protection and fence placed along the sidewalk and parking lot edge while the eucalyptus will need Type I protection onto the site. The three privet (Ligustrum lucidum) along Embarcadero Road are to be removed and replaced with flax-leaved paperbark (*Melaleuca linariifolia*).

In total there are thirteen protected street trees comprised of ten Chinese elms and three privet. In addition to the protected street trees there are eleven eucalyptus growing on adjacent sites that will also require preservation.

Introduction

Background

Thomas Behringer at Skender Construction asked me to assess the site, trees, and proposed plans to provide a report with my findings and recommendations to help satisfy the City of Palo Alto planning requirements.

Assignment

1. Provide an arborist's report that includes an assessment of the trees within the project area. The assessment is to include the species, size (trunk diameter), condition (health and structure), suitability for preservation ratings, and disposition.
2. Provide tree protection specifications and influence ratings for the trees that will be affected by the project. Include Palo Alto required practices.

Limits of the assignment

1. The information in this report is limited to the condition of the trees during my inspection on December 23, 2015. No tree risk assessments were performed.
2. Tree tagging, trunk diameter measurements, and tree locations were taken from the Bay Area Tree Specialists report dated August 3, 2015 with permission and verified by Monarch Consulting Arborists LLC on December 22, 2015.
3. The plans reviewed for this assignment were as follows: Demo Plan C01.00, Utility Plan C05.00 , Grading Plan GR03.00, Storm Water Plan GR03.02 dated November 5, 2015 provided by Gensler.

Purpose and use of the report

The report is intended to identify all the trees within the plan area that could be affected by a project. The report is to be used by the property owners, their agents, and the City of Palo Alto as a reference for existing tree conditions to help satisfy the City of Palo Alto planning requirements.

Observations

Site and Trees

The site is located at the corner of East Bayshore Road and Embarcadero Road in Palo Alto. The property has eleven on trees adjacent sites with crowns extending over the boundary which are as follows: one red gum (*Eucalyptus camaldulensis*), two silver dollar gum (*Eucalyptus polyanthemos*), and eight red ironbarc (*Eucalyptus sideroxylon*). Along East Bayshore Road there are ten street trees all comprised of Chinese elms (*Ulmus parvifolia*) adjacent to the sidewalk with no park strip. Along Embarcadero Road are three additional privet (*Ligustrum lucidum*) street trees growing in the park strip between the sidewalk and curb. In total there are thirteen street trees and eleven trees growing on adjacent sites which are require protection based on their locations. The interior of the property contains thirty-nine specimens none of which are oaks (Quercus sep.) or redwoods (*Sequoia sempervirens*) or protected by the municipal ordinance.

Trees and Plans

All the trees located in the interior of the property are to be demolished (C01.00) except for Chinese elm number 12 located near the corner of Embraeadero Road and East Bayshore Road.

There are five areas where the storm drains are located near existing protected trees which are as follows:

- Two along the west side of the site along East Bayshore Road near street trees.
- One along the south side near at least one neighboring red ironbark.
- Two near the southeast corner around the two silver dollar gums, one red gum, and one red ironbark 60, 61, 62, and 63.

Trenching for the drains will occur in those areas but appears far from the trees or at least outside of ten times their trunk diameter. Grading will occur in those areas to allow for the proper drainage toward the surface drains but again is far enough from the trees it should not be a problem.

The construction of the "Car Wash" will also be under some red ironbarks located on the adjacent site.

Water connections will be near Chinese elm number 1 and there are several other utilities in the general area. Protection around that tree will be required and monitoring advised.

Street trees 11, 38, and 40 are to be removed and replaced.

Discussion

Tree Inventory

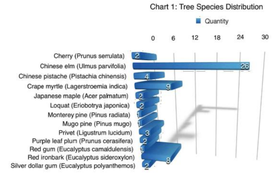

The tree inventory consists of all the trees on the property and those directly adjacent with crowns that extend over the boundary. The City of Palo Alto municipal ordinance protects oaks (*Quercus spp.*) and redwoods (*Sequoia sempervirens*) of certain sizes and street trees along public roadways. Trees on adjacent sites are to be protected regardless of size or species because it is illegal to compromise a neighboring tree.

All trunk diameters were taken from the Bay Area Tree Specialists report and heights and crown diameters are estimates. Aluminum tree tags are affixed to all trees listed in the inventory while trees on the adjacent sites have tags on the nearby fence.

The inventory contains 63 trees comprised of 13 different species. Chinese elm accounts for 41 percent of all trees while crape myrtle and red ironbark comprise 14 and 13 percent respectively as the next most abundant species. Thirteen trees, ten Chinese elms and three privets, are protected street trees. Eleven additional eucalyptus are located on adjacent properties requiring protection.

The chart below lists the species and their relative quantity within the project area (Chart 1).

Chart 1: Tree Species Distribution

Condition Rating

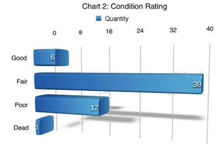

A tree's condition is a determination of its overall health and structure based on five aspects: Roots, trunk, scaffold branches, twigs, and foliage. The assessment considered both the health and structure of the trees for a combined condition rating.

- Exceptional = Good health and structure with significant size, location or quality.
- Good = No apparent problems, good structure and health, good longevity for the site.
- Fair = Minor problems, at least one structural defect or health concern, problems can be mitigated through cultural practices such as pruning or a plant health care program.
- Poor = Major problems with multiple structural defects or declining health, not a good candidate for retention.
- Dead/Unstable = Extreme problems, irreversible decline, failing structure, or dead.

Most trees are in fair condition with 39 specimens while 17 more are in poor shape. Trees in poor shape are primarily comprised of Chinese elms around the interior perimeter suppressed by the eucalyptus. Six trees are in good condition which include the three Chinese pistache in the interior parking lot. The Monterey pine 36 is dead and located in the northeast corner along Embarcadero Road.

The chart below list the condition ratings and the relative quantity of each category (Chart 2).

Chart 2: Condition Rating

Suitability for Preservation

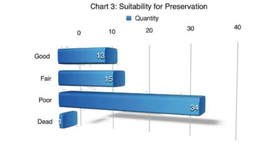

A tree's suitability for preservation is determined based on its health, structure, age, species characteristics, and longevity using a scale of good, fair, or poor. The following list defines the rating scale (Tree Care Industry Association, 2012):

- Good = Trees with good health, structural stability and longevity.
- Fair = Trees with fair health and/or structural defects that may be mitigated through treatment. These trees require more intense management and monitoring, and may have shorter life spans than those in the good category.
- Poor = Trees in poor health with significant structural defects that cannot be mitigated and will continue to decline regardless of treatment. The species or individual may possess characteristics that are incompatible or undesirable in landscape settings or unsuited for the intended use of the site.

Thirty-four trees have poor suitability for preservation including all the crape myrtles and Chinese elms around the interior. Among those poorly suited are three protected privet street trees along Embarcadero Road. Thirteen trees have good suitability for preservation including the ten protected Chinese elms along East Bayshore Road and two Chinese pistache in the interior. Fifteen have fair suitability including the red ironbarks on the adjacent site. One Monterey pine number 36 is dead.

The chart below list the condition ratings and the relative quantity of each category (Chart 3).

Chart 3: Suitability for Preservation

Influence Level

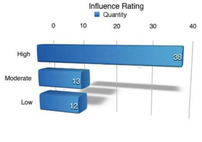

Influence level defines how a tree may be influenced by construction activity and proximity to the tree, and is described as low, moderate, or high. The following scale defines the impact rating (Matheny, N. and Clark, J. 1998):

- Low = The construction activity will have little influence on the tree.
- Moderate = The construction may cause future health or structural problems, and steps must be taken to protect the tree to reduce future problems.
- High = Tree structure and health will be compromised and removal is recommended, or other actions must be taken for the tree to remain. The tree is located in the building envelope.

Thirty-eight trees will be highly affected by the project and need to be removed (Appendix B1). None of the 38 are protected by the ordinance. Thirteen trees will be moderately influenced which are all the eucalyptus along the adjacent sites and Chinese elm number 1 along E. Bayshore Road. All the moderately affected trees are protected and there will be some grading and drainage nearby and the car wash construction close by. The plans do not indicate the locations of these trees relative to the grading, drainage, and utility improvements and it is difficult to determine just how close the trees are to the disturbances. Twelve trees will not be expected to impacted which include all the protected street trees with the exception of Chinese elm number 1.

The chart below lists the trees and the development influence rating (Chart 4).

Influence Rating

Tree Protection

Tree protection focuses on protecting trees from damage to the roots, trunk, or scaffold branches from heavy equipment (Appendix D).

The TPZ is defined by the City of Palo Alto as the following: "unless otherwise specified by a project arborist or City Arborist, the area of temporary fenced tree enclosure. Within the TPZ, roots that are critical for tree survival are typically found in the upper three foot soil horizon, and may extend beyond the dripline area. Protecting the roots in the TPZ is necessary to ensure the tree's survival. The TPZ is a restricted activity zone where no soil disturbance is permitted, unless otherwise approved. TPZ must be identified for each tree and shown on all applicable improvement plans for a development project."

The City of Palo Alto has two different tree protection requirements that apply to this project which are called Type I and Type II (Figures 1 and 2). The eucalyptus would need to have tree protection fence placed at the maximum encroachment distance of ten times their trunk diameter onto the site using Type I tree protection (Appendix B2). The street trees will require Type II protection and fence to be placed along the sidewalk enclosing the trees within the planted area between the sidewalk and parking lot or sidewalk and curb.

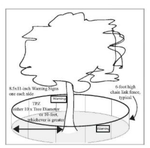

Figure 1: Type I Tree protection with fence placed at a radius of ten times the trunk diameter. Image City of Palo Alto 2006.

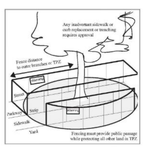

Figure 2: Type II Tree protection with fence placed along the sidewalk and curb to enclose the tree. Image City of Palo Alto 2006.

Palo Alto Required Practices

Activities prohibited within the TPZ include

In addition to the tree protection guidelines stipulated in Appendix D the following is prohibited within the tree protection zone and required by the Palo Alto Municipal Code (Copied from the Tree Technical Manual, City of Palo Alto 2001).

> Storage or parking vehicles, building materials, refuse, excavated spoils or dumping of poisonous materials on or around trees and roots. Poisonous materials include, but are not limited to, paint, petroleum products, concrete or stucco mix, dirty water or any other material which may be deleterious to tree health.
>
> The use of tree trunks as a winch support, anchorage, as a temporary power pole, sign posts or other similar function.
>
> Cutting of tree roots by utility trenching, foundation digging, placement of curbs and trenches and other miscellaneous excavation without prior approval of the City Arborist.
>
> Soil disturbance or grade change (see Grade Changes and Trenching, Section 2.20).
>
> Drainage changes.

Grading Limitations within the Tree Protection Zone

The following changes in grade are prohibited within the tree protection zone and required by the Palo Alto Municipal Code (Copied from the Tree Technical Manual, City of Palo Alto 2001).

> Grade changes outside of the TPZ shall not significantly alter drainage to the tree.
>
> Grade changes within the TPZ are not permitted.
>
> Grade changes under specifically approved circumstances shall not allow more than 6-inches of fill soil added or allow more than 4-inches of existing soil to be removed from natural grade unless mitigated.
>
> Grade fills over 6-inches or impervious overlay shall incorporate notes: an approved permanent aeration system, permeable material or other approved mitigation.
>
> Grade cuts exceeding 4-inches shall incorporate retaining walls or an appropriate transition equivalent.

Trenching or Tunneling for Utilities Near Street Trees

When trenching near the street tree the following shall be followed and required by the Palo Alto Municipal Code (Copied from the Tree Technical Manual, City of Palo Alto 2001):

Notification: Contractor shall notify the project arborist a minimum of 24 hours in advance of the activity in the TPZ.

Root Severance: Roots that are encountered shall be cut to sound wood and repaired. Roots 2-inches and greater must remain injury free.

> Root injury (Root injury, Section 2.25 A-1): If trenches are cut and tree roots 2-inches or larger are encountered they must be cleanly cut back to a sound wood lateral root. The end of the root shall be covered with either a plastic bag and secured with tape or rubber band, or be coated with latex paint. All exposed root areas within the TPZ shall be backfilled or covered within one hour. Exposed roots may be kept from drying out by temporarily covering the roots and draping layered burlap or carpeting over the upper 3-feet of trench walls. The materials must be kept wet until backfilled to reduce evaporation from the trench walls.

Excavation: Any approved excavation, demolition or extraction of material shall be performed with equipment sitting outside the TPZ. Methods permitted are by hand digging, hydraulic or pneumatic air excavation technology. Avoid excavation within the TPZ during hot, dry weather.

> If excavation or trenching for drainage, utilities, irrigation lines, etc., it is the duty of the contractor to tunnel under any roots 2-inches in diameter and greater.
>
> Prior to excavation: for foundation/footings/walls, grading or trenching within the TPZ, roots shall first be severed cleanly 1- foot outside the TPZ and to the depth of the future excavation.
>
> The trench must then be hand dug and roots pruned with a saw, sawzall, narrow trencher with sharp blades or other approved root pruning equipment.

Tunneling & Directional Drilling: If trenching or pipe installation has been approved within the TPZ, then the trench shall be either cut by hand, air-spade, hydraulic vac-m excavation or, by mechanically boring the tunnel under the roots with a horizontal directional drill and hydraulic or pneumatic air excavation technology. In all cases, install the utility pipe immediately, backfill with soil and soak within the same day. Installation of private utility improvements shall be tunnel bored beneath the tree and roots.

Root Zone Protection Around the Protected Trees

The following measures should be taken when designing the car wash station and required by the Palo Alto Municipal Code (Copied from the Tree Technical Manual, City of Palo Alto 2001):

> **Heavy Equipment**: Use of backhoes, steel tread tractors or any heavy vehicles within the TPZ is prohibited unless approved by the City Arborist. If allowed, a protective root buffer (see Root Buffer and Damage to Trees, Section 2.25.A-1) is required. The protective buffer shall consist of a base course of tree chips spread over the root area to a minimum of 6-inch depth, layered by 3/4-inch quarry gravel to stabilize 3/4-inch plywood on top. This buffer within the TPZ shall be maintained throughout the entire construction process.
>
> **Structural design:** If injurious activity or interference with roots greater than 2-inches will occur within the TPZ, plans shall specify a design of special foundation, footing, walls, concrete slab or pavement designs subject to City Arborist approval. Discontinuous foundations such as concrete pier and structural grade beam must maintain natural grade (not to exceed a 4-inch cut), to minimize root loss and allow the tree to use the existing soil.
>
> **Hardscape installation**: When designing hardscape areas near trees, the project architect or engineer should consider the use of recommended base course material such as an engineered structural soil mix. The Palo Alto approved structural soil mix will allow a long term cost effective tree and infrastructure compatibility that is particularly suited for the following types development projects: repair or replacement of sidewalk greater than 40-feet in length; subdivisions with new street tree plantings; planting areas that are designed over structures or parking garages; confined parking lot medians and islands or other specialized conditions as warranted. (see City of Palo Alto Public Works Improvement Specifications Standards and; www.amsresi.com/esi-stc)

Tree Pruning, Surgery, and Removal

> **Minimum Pruning**: If the project arborist recommends that trees be pruned, and the type of pruning is left unspecified, the standard pruning shall consist of "crown cleaning" as defined by ISA Best Management Practices: Pruning 2008 with the objective to reduce risk and/or improve structure.
>
> **Maximum Pruning**: Maximum pruning should only occur in the rarest situation approved by the City Arborist. No more than one fourth (25 percent) of the functioning leaf and stem area may be removed within one calendar year of any protected or designated tree, or removal of foliage so as to cause the unbalancing of the tree.

> **Tree Workers:** Pruning shall not be attempted by construction or contractor personnel, but shall be performed by a qualified tree care specialist or certified tree worker, according to specifications written according to ANSI A300 (Part 1) *Pruning* with measurable criteria outlining the objective, method (type), amount or quantity of live foliage to be removed, the size range of branches indicated in diameter, and the location within the tree where the pruning is to be performed.
>
> **Surgery:** Prior to construction, if it is necessary to promote health and prolong useful life or the structural characteristics, then trees shall be provided the appropriate treatments (e.g. cavity screening, bark tracing, wound treatment, cables, rods or pole supports) as specified by the project arborist.
>
> **Tree Removal Procedure:** When Regulated Trees are removed and adjacent trees that are to be preserved (as shown on the approved site plans) must be protected, then the following tree removal practices apply:
>
> - **Tree Removal:** Removal of trees that extend into the branches or roots of Regulated Trees shall not be attempted by demolition or construction personnel, grading or other heavy equipment. A certified arborist or tree worker shall remove the tree carefully in a manner that causes no damage above or below ground to trees that remain.
> - **Stump Removal:** Before performing stump extraction, the developer shall first consider whether or not roots may be entangled with trees that are to remain. If so, these stumps shall have their roots severed before extracting the stump. Removal shall include the grinding of stump and roots to a minimum depth of 24-inches but expose soil beneath stump to provide drainage. In sidewalk or small planter areas to be replanted with a new tree, the entire stump shall be removed and the planting pit dug to a depth of 30- inches. If dug below 30-inches, compact the backfill to prevent settling. Large surface roots three feet from the outside circumference shall be removed, including the spoils and backfilled with City approved topsoil to grade, and the area tamped to settle the soil.

Damage to Trees

> **Reporting:** Any damage or injury to trees shall be reported within 6-hours to the project arborist and job superintendent or City Arborist so that mitigation can take place. All mechanical or chemical injury to branches, trunk or to Required Practices notes: roots over 2-inches in diameter shall be reported in the monthly inspection report.
>
> **Penalty for damage to street trees:** In the event that street trees or their roots have been damaged, the contractor or property owner shall be subject to the penalty rate of $100.00 per inch of damage.

Conclusion

The site is located at the corner of East Bayshore Road and Embarcadero Road. The inventory consists of 63 trees comprised of 13 different species and includes those on the property and directly adjacent. Forty-one percent of all trees are Chinese elms with twenty-six specimens. Thirteen trees, ten Chinese elms and three privets, are protected street trees. Eleven additional eucalyptus are located on adjacent properties also requiring protection.

Thirty-nine trees are in fair condition while seventeen are in poor shape. Six are in good condition which include the three Chinese pistache in the interior parking lot. Pine number 36 is dead along Embarcadero Road.

Thirty-four trees have poor suitability for preservation including all the crape myrtles and Chinese elms around the interior. Among those poorly suited are three protected privet street trees along Embarcadero Road and consideration for removal and replacement should be made. Thirteen trees have good suitability for preservation including the ten protected Chinese elms along East Bayshore Road. Fifteen have fair suitability including the red ironbarks on the adjacent site.

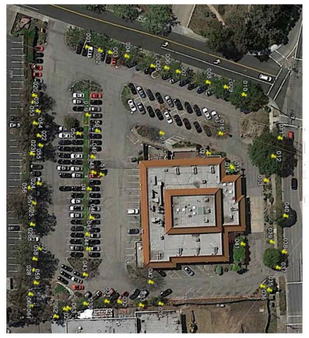

Thirty-eight trees will be highly affected by the project and require removal (Appendix B1). None of these 38 are protected by the ordinance. Thirteen trees will be moderately influenced which are all the eucalyptus along the adjacent sites and Chinese elm number 1. All the moderately affected trees are protected and it appears there will be grading and drainage along with the car wash construction nearby. The plans do not indicate the locations of the adjacent trees relative to the grading, drainage, and utility improvements and it is difficult to determine just how close they are to the disturbances. Twelve trees will not be expected to impacted which include all the protected street trees with the exception of Chinese elm number 1.

The eucalyptus numbers 53 through 63 will need to have tree protection fence placed at their maximum encroachment distances of ten times their trunk diameter onto the site using Type I tree protection (Appendix I32). The street trees will require Type II protection and fence placed along the sidewalk and parking lot and between the sidewalk and curb.

In total there are thirteen protected street trees comprised of ten Chinese elms and three privets. In addition to the protected street trees are eleven eucalyptus growing on adjacent sites requiring preservation. No trees of oak or redwood species are on the site or directly adjacent. A tree disposition table is located in Appendix B1 indicating those to be removed or retained, protected on adjacent sites, and their protection status of either street tree or adjacent tree.

Care will be required while working around the street trees for utility hook ups and grading near the south boundary where the eucalyptus are located. Tree protection radii are located in Appendix I32 indicating ten times the trunk diameter distances for each tree to be protected.

Appendix A: Tree Inventory Map

Tree inventory map produced and provided by Bay Area Tree Specialists, August 8, 2015.

Recommendations

Pre-Construction Phase

1. Locate all trees to be retained on all plans and indicate their required tree protection zones/ drip line distances of ten times their trunk diameters as required. Place all tree protection fence and locations on all plans including civil and construction documents.
2. Protect the street trees 1 through 10 as a group along East Bayshore Road by placing fence along the edge of the parking lot and sidewalk to enclose a rectangular fenced area as specified for "Type II" fence protection.
3. Remove street trees 11, 38, and 40 and replant with (two-leaved paperbark (*Melaleuca Linariifolius*).
4. Protect eucalyptus trees 53 through 63 by placing tree protection fence at a distance of ten times their trunk diameters as per the City of Palo Alto tree protection zone recommendations (Appendix B2).
5. Place straw wattle at the base of the tree protection on the construction side to help prevent soils from sloughing into the tree protection zone as an erosion control measure.
6. Remove all trees to be demolished after obtaining all necessary permits from the City of Palo Alto.
7. Provide a copy of this report to all contractors and project managers, including the architect, civil engineer, and landscape designer or architect. It is the responsibility of the owner to ensure all parties are familiar with this document.
8. Arrange a pre-construction meeting with the project arborist or landscape architect to verify tree protection is in place, with the correct materials, and at the proper distances.
9. Arrange for the project arborist or landscape architect to monitor and document initial grading activity and no grading is to occur within any tree protection zone.
10. Provide a monthly monitoring schedule to planning expected to be every four weeks and when activity is expected within the TPZ.
11. Refer to Appendix D for general tree protection guidelines.

Appendix B: Tree Inventory and Disposition Tables

Table 1: Tree Inventory and Assessment

Tree Species	#	Trunk Diameter	~ Height	~ Crown Diameter	Condition	Suitability	Influence Level
Chinese elm (*Ulmus parvifolia*)	1	13.5	20	30	Fair	Good	Moderate

Chinese pistache (*Pistachia chinensis*)	16	13	25	35	Good	Good	High

Construction Phase

1. Place irrigation or soaker hoses on the existing grade under the within the drip line area or within the tree protection zone or automatic irrigation under trees 1 through 10, 11, 12, 38, and 40.
2. Place two to four inches of organic mulch, course woody debris, chips from tree care operations under the trees and over the soaker hoses within the tree protection zone.
3. If construction is to take place between June and October the trees should be watered to help mitigate any root loss and reduce stress. Ten gallons per inch of trunk diameter of water should be used to irrigate the root zones once a week with a deep soaking.
4. If roots are expected to be cut the work shall be supervised and documented by the project arborist. If tree roots 2 inches or larger are encountered they must be cleanly cut back to a sound wood lateral root. The end of the root shall be covered with either a plastic bag and secured with tape or rubber band, or be coated with latex paint. All exposed root areas within the TPZ shall be backfilled or covered within one hour. Exposed roots may be kept from drying out by temporarily covering the roots and draping layered burlap or carpeting over the upper 3-feet of trench walls. The materials must be kept wet until backfilled to reduce evaporation from the trench walls.
5. Trenching or boring for utilities within the tree protection zone of the street trees or within shall be monitored and documented by the project arborist.
6. Provide monthly monitoring documentation to planning as required at least once every four weeks.

Post-Construction Phase

1. Monitor the health and structure of all trees for any changes in condition.
2. Manage soil moisture and maintain mulch.
3. Perform any other mitigation measures to help ensure long term survival.

Glossary of Terms

Defect: An imperfection, weakness, or lack of something necessary. In trees defects are injuries, growth patterns, decay, or other conditions that reduce the tree's structural strength.

Diameter at breast height (DBH): Measures at 1.4 meters (4.5 feet) above ground in the United States, Australia (arboriculture), New Zealand, and when using the Guide for Plant Appraisal, 9th edition; at 1.3 meters (4.3 feet) above ground in Australia (forestry), Canada, the European Union, and in UK forestry; and at 1.5 meters (5 feet) above ground in UK arboriculture.

Drip Line (as defined by the City of Palo Alto): Means the area within X distance from the trunk of a tree, measured from the perimeter of the trunk of the tree at 54-inches above natural grade, where X equals a distance ten times the diameter of the trunk at 54-inches above natural grade.

Scaffold branches: Permanent or structural branches that for the scaffold architecture or structure of a tree.

Street Tree: Means any publicly owned tree, shrub or plant growing within the street right-of-way, outside of private property. In some cases, property lines lie several feet behind the sidewalks. A permit from the Public Works Department is required prior to any work on or around these trees. Check with the Public Works Department to verify prior to any work near a street tree (see Introduction - Use of The Manual, Regulated Trees)

Tree Protection Zone or (TPZ) (as defined by the City of Palo Alto): means, unless otherwise specified by a project arborist or City Arborist, the area of temporary fenced tree enclosure. Within the TPZ, roots that are critical for tree survival are typically found in the upper three foot soil horizon, and may extend beyond the dripline area. Protecting the roots in the TPZ is necessary to ensure the tree's survival. The TPZ is a restricted activity zone where no soil disturbance is permitted, unless otherwise approved. TPZ must be identified for each tree and shown on all applicable improvement plans for a development project.

Tree Risk Assessment: Process of evaluating what unexpected things could happen, how likely it is, and what the likely outcomes are. In tree management, the systematic process to determine the level of risk posed by a tree, tree part, or group of trees.

Trunk: Stem of a tree.

This Glossary of terms was adapted from the Glossary of Arboricultural Terms (ISA, 2011) and the Palo Alto Tree Technical Manual, 2001.

Appendix D: Tree protection specifications

Tree protection locations should be marked before any fencing contractor arrives.

Pre-Construction Meeting with the Project Arborist

Prior to beginning work, all contractors involved with the project should attend a pre construction meeting with the project arborist to review the tree protection guidelines. Access routes, storage areas, and work procedures will be discussed.

Tree Protection Zones and Fence Specifications

Tree protection fence should be established prior to the arrival of construction equipment or materials on site. Fence should be comprised of six-foot high chain link fence mounted on eight-foot tall, 1 7/8-inch diameter galvanized posts, driven 24 inches into the ground and spaced no more than 10 feet apart. Once established, the fence must remain undisturbed and be maintained throughout the construction process until final inspection.

The fence should be maintained throughout the site during the construction period and should be inspected periodically for damage and proper functions.

Fence should be repaired, as necessary, to provide a physical barrier from construction activities.

A final inspection by the city arborist at the end of the project will be required prior to removing any tree protection fence and replacement tree shall be planted at this time.

Monitoring

Any trenching, construction or demolition that is expected to damage or encounter tree roots should be monitored by the project arborist or a qualified ISA Certified Arborist and should be documented.

The site should be evaluated by the project arborist or a qualified ISA Certified Arborist after construction is complete, and any necessary remedial work that needs to be performed should be noted.

Restrictions Within the Tree Protection Zone

No storage of construction materials, debris, or excess soil will be allowed within the Tree Protection Zone. Spoils from the trenching shall not be placed within the tree protection zone either temporarily or permanently. Construction personnel and equipment shall be routed outside the tree protection zones.

Root Pruning

Root pruning shall be supervised by the project arborist. When roots over two inches in diameter are encountered they should be pruned by hand with loppers, handsaw, reciprocating saw, or chain saw rather than left crushed or torn. Roots should be cut beyond sinker roots or outside root branch junctions and be supervised by the project arborist. When completed, exposed roots should be kept moist with burlap or backfilled within one hour.

Boring or Tunneling

Boring machines should be set up outside the drip line or established Tree Protection Zone. Boring may also be performed by digging a trench on both sides of the tree until roots one inch in diameter are encountered and then hand dug or excavated with an Air Spade® or similar air or water excavation tool. Bore holes should be adjacent to the trunk and never go directly under the main stem to avoid oblique (heart) roots. Bore holes should be a minimum of three feet deep.

Timing

If the construction is to occur during the summer months supplemental watering and bark beetle treatments should be applied to help ensure survival during and after construction.

Tree Pruning and Removal Operations

All tree pruning or removals should be performed by a qualified arborist with a C-61/D-49 California Contractors License. Tree pruning should be specified according to ANSI A-300A pruning standards and adhere to ANSI Z133.1 safety standards. Trees that need to be removed or pruned should be identified in the pre-construction walk through.

Tree Protection Signs

All sections of fencing should be clearly marked with signs stating that all areas within the fencing are Tree Protection Zones and that disturbance is prohibited. Text on the signs should be in both English and Spanish (Appendix E).

Qualifications, Assumptions, and Limiting Conditions

Any legal description provided to the consultant is assumed to be correct. Any titles or ownership of properties are assumed to be good and marketable. All property is appraised or evaluated as though free and clear, under responsible ownership and competent management.

All property is presumed to be in conformance with applicable codes, ordinances, statutes, or other regulations.

Care has been taken to obtain information from reliable sources. However, the consultant cannot be responsible for the accuracy of information provided by others.

The consultant shall not be required to give testimony or attend meetings, hearings, conferences, mediations, arbitration, or trials by reason of this report unless subsequent contractual arrangements are made, including payment of an additional fee for such services.

This report and any appraisal value expressed herein represent the opinion of the consultant, and the consultant's fee is not contingent upon the reporting of a specified appraisal value, a stipulated result, or the occurrence of a subsequent event.

Sketches, drawings, and photographs in this report are intended for use as visual aids, are not necessarily to scale, and should not be construed as engineering or architectural reports or surveys. The reproduction of information generated by architects, engineers, or other consultants on any sketches, drawings, or photographs is only for coordination and ease of reference. Inclusion of said information with any drawings or other documents does not constitute a representation as to the sufficiency or accuracy of said information.

Unless otherwise expressed: a) this report covers only examined items and their condition at the time of inspection; and b) the inspection is limited to visual examination of accessible items without dissection, excavation, probing, or coring. There is no warranty or guarantee, expressed or implied, that structural problems or deficiencies of plants or property may not arise in the future.

Certification of Performance

I Richard Gessner, Certify:

That I have personally inspected the tree(s) and/or the property referred to in this report, and have stated my findings accurately. The extent of the evaluation and/or appraisal is stated in the attached report and Terms of Assignment;

That I have no current or prospective interest in the vegetation or the property that is the subject of this report, and I have no personal interest or bias with respect to the parties involved;

That the analysis, opinions and conclusions stated herein are my own;

That my analysis, opinions, and conclusions were developed and this report has been prepared according to commonly accepted Arboricultural practices;

That no one provided significant professional assistance to the consultant, except as indicated within the report.

That my compensation is not contingent upon the reporting of a predetermined conclusion that favors the cause of the client or any other party, nor upon the results of the assessment, the attainment of stipulated results, or the occurrence of any other subsequent events;

I further certify that I am a Registered Consulting Arborist® with the American Society of Consulting Arborists, and that I acknowledge, accept and adhere to the ASCA Standards of Professional Practice. I am an International Society of Arboriculture Board Certified Master Arborist® and Tree Risk Assessor Qualified. I have been involved with the practice of Arboriculture and the care and study of trees since 1998.

Richard J. Gessner

ASCA Registered Consulting Arborist® #496
ISA Board Certified Master Arborist® WE-4341B
ISA Tree Risk Assessor Qualified

Other than specific exception granted for copies made by the client for the express uses stated in this report, no parts of this publication may be reproduced, stored in a retrieval system, or transmitted in any form or by any means, electronic, mechanical, recording, or otherwise without the express, written permission of the author.

NOTES:

1. THIS SITE CONTAINS REGULATED TREES, INCLUDING NEIGHBORING TREES THAT OVERHANG THE PROJECT SITE.

2. LANDSCAPE MODIFICATIONS, CHANGES IN IRRIGATION, ADDING PLANT MATERIAL OR ANY EXCAVATION WITHIN 10-]FEET OF STREET TREES MUST BE APPROVED IN ADVANCE BY THE URBAN FORESTRY SECTION AT (650) 496-5953.

3. TREE REMOVAL: CONTRACTOR SHALL OBTAIN A COMPLETED URBAN FORESTRY TREE CARE PERMIT # _____ SEPARATE FROM THE BUILDING OR STREET WORK PERMIT. PERMIT NOTICE HANGER AND CONDITIONS APPLY. CONTACT (650) 496-5953

THE TREE CARE PERMIT FOR TREE REMOVAL REQUESTS AVAILABLE FROM THE URBAN FORESTRY WEBPAGE:
HTTP://WWW.CITYOFPALOALTO.ORG/GOV/DEPTS/PWD/TREES/DEFAULT.ASP

4. THE CITY REQUIRES ADEQUATE ROOTABLE SOIL VOLUME AREAS FOR HEALTHY TREES. THE VOLUME OF ROOTABLE SOIL TO BE PROVIDED PER TREE IS BASED ON THE SIZE OF THE TREE AT MATURITY:
-600 CUBIC FEET OF ROOTABLE SOIL VOLUME SHALL BE INSTALLED PER SMALL TREE.
-900 CUBIC FEET PER MEDIUM-SIZED TREE AND
-1200 CUBIC FEET PER LARGE-]SIZED TREE
THE ABOVE SOIL VOLUME IS REQUIRED FOR ALL TREES PLANTED IN PARKING LOT ISLANDS LESS THAN 5' WIDE, USING ADJACENT AREA WITH PERVIOUS SURFACE ABOVE (E.G. PAVERS.) ALL IMPORTED SOILS SHALL BE TESTED AND THE RESULTS PROVIDED TO THE CITY FOR APPROVAL BEFORE IMPORT. IMPORT SOIL SHALL BE AMENDED WITH COMPOST PER CITY STANDARDS IN PLACE OF OTHER SOIL AMENDMENTS. STREET TREES REQUIRE AN AUTOMATIC IRRIGATION/BUBBLER SYSTEM AND MAY REQUIRE TREE GRATES.

5. SOIL ANALYSIS FOR PLANTING, SOIL ANALYSIS SHALL BE REQUIRED FOR ANY PROJECT WHERE GRADING DISTURBS MORE THAN 2,500 SQUARE FEET OF LAND AREA. A SOIL ANALYSIS REPORT SHALL DOCUMENT THE VARIOUS CHARACTERISTICS OF THE SOIL (E.G. TEXTURE, INFILTRATION RATE, PH, SOLUBLE SALT CONTENT, PERCENT ORGANIC MATTER, ETC.), AND PROVIDE RECOMMENDATIONS FOR AMENDMENTS AS APPROPRIATE FOR
c) THE IMPROVED HEALTH OF NATIVE AND NATURALIZED TREES PROTECTED ON THE SITE:
d) SPECIFICALLY FOR THE NEW TREE, SHRUB & GROUND COVER SPECIES PLANTED ON SITE AND,
e) TO OPTIMIZE THE PRODUCTIVITY AND WATER-EFFICIENCY OF THE SOIL.
THE SOIL ANALYSIS REPORT SHALL BE MADE AVAILABLE TO THE PROFESSIONALS PREPARING THE TREE ASSESSMENT OR PROTECTION REPORT, LANDSCAPE AND IRRIGATION DESIGN PLANS IN A TIMELY MANNER EITHER BEFORE OR DURING THE DESIGN PROCESS. A COPY OF THE SOILS ANALYSIS REPORT SHALL BE SUBMITTED TO THE CITY AS PART OF THE LANDSCAPE DOCUMENTATION PACKAGE. THE PLANNING AND/OR PUBLIC WORKS DEPARTMENTS SHALL HAVE DISCRETION TO REQUIRE SOIL ANALYSIS AND TREATMENTS AS A CONDITION OF APPROVAL FOR ANY GRADING PERMIT, BUILDING SITE APPROVAL, ARCHITECTURE AND SITE APPROVAL, USE PERMIT OR DESIGN REVIEW; WHERE A LANDSCAPE PROJECT SUBMITTAL IS REQUIRED.

6. BASE UNDER SIDEWALK, PLAZA, ROAD OR COMPACTED SURFACES, ENGINEERED SOIL MIX, SUCH AS STRUCTURAL SOIL OR OTHER ENGINEERED SOIL, SILVA CELLS OR OTHER PRODUCTS IN CONSULTATION WITH THE CONSULTING PROJECT ARBORIST.

CITY OF PALO ALTO

Project Arborist Certification Letter

Prior to demolition, building, or grading permit issuance, the project arborist must sign this certification letter. By signing, the arborist certifies that the following items have been met:

- Reviewed the entire building permit plan set submittal, and all updated Tree Protection Report (TPR) measures and changes are incorporated in the plan set.
- Affirms that the T-1 (Tree Protection- it's Part of the Plan!) is included in the plan set with the Tree Disclosure Statement complete/signed by the Property Owner or Agent.
- Reviewed the Urban Forestry Conditions of Approval, and required items (e.g. specific plan notes and standard drawings) have been included in all relevant permit sheets.
- Confirms that ongoing Contractor/Project Arborist site monitoring inspections and reporting have been arranged with the contractor or owner.
- If protected oaks, redwoods, or designated trees are located on or next to the property, an itemized list of any activity impacts has been quantified and mitigated in the Tree Protection Zone for each tree.
- Confirms that changes to plans before or during construction shall be reviewed by the project arborist and responded to with a written letter of acceptance before submitting the revision to the Building Department for review by Planning, Public Works, or Urban Forestry.

Project Address: 1700 Embarcadero Road

I, Richard Gessner, certify that the items listed have been addressed and are in accordance with City of Palo Alto standards and Building Permit stipulations.

CONTEXT MAP

FAR CALCULATION

SIZE OF LOT: 110,432 SQUARE FEET (SF)
NOTE THAT PURSUANT TO THE ZONING CODE, ALLOWABLE FLOOR AREA RATIO (FAR) IS 0.4:1 FOR THE DEALERSHIP AND ADDITIONAL 0.25:1 FOR THE SHWROOM SPACE

ALLOWED:
0.40:1 = 44,173 SF ALLOWED
0.29:1 = 32,025 SF ALLOWED

PROPOSED:
1ST FLOOR SF (EXCLUDING SERVICE DRIVE): 25,480 SF 2ND FLOOR SF: 5,715 SF
TRASH ENCLOSURE: 381 SF = TOTAL AREA: 31,195 SF

SERVICE DRIVE (THIS IS THE ONLY EXCLUDED SF ON THE SITE): 4,499 SF
TOTAL SQUARE FOOTAGE OF DEALERSHIP (EVERYTHING BUT SERVICE DRIVE AND SHOWROOM):
27,098 SF TOTAL SQUARE FOOTAGE OF SHOWROOM: 4,097 SF

TOTAL SQUARE FOOTAGE OF BUILDING FOOTPRINT PLUS TRASH ENCLOSURE
(THIS IS FOR THE MAX LOT COVERAGE): 35,694 SF

*SEE SHEET 04 FOR AREA DIAGRAMS

PROJECT SUMMARY

THIS PROJECT ENTAILS THE CONSTRUCTION OF A NEW AUTOMOTIVE DEALERSHIP WITH A SERVICE FACILITY. THE BUILDING HAS A PARAPET OF 26'-0" AND A PYLON TOWER OF 36'-0". EXTERIOR CLADDING OF THE PROPOSED FACILITY WILL CONSIST OF GLAZING, ACM PANELS, RIBBED METAL PANELS, RECLAIMED WOOD SIDING, STUCCO, AND A LANDSCAPE WALL.

THE REAR OF THE SITE CONTAINS A DRIVEWAY ALLOWING ACCESS FROM THE PROPOSED MERCEDES-BENZ DEALERSHIP TO THE EXISTING AUDI DEALERSHIP NEXT DOOR.

THIS BUILDING HAS MIXED OCCUPANCY CLASSES OF B, S-1, AND S-2.

PARKING CALCULATIONS

CUSTOMER PARKING REQUIRED - 1 SPACE PER 400 SF OF SALES, SERVICE, AND OFFICE ADMINISTRATION. 1 SPACE PER 500 SF OF EXTERIOR DISPLAY

TOTAL SALES, SERVICES AND OFFICE AREA = 31,195 SF / 400 = 78 SPACES
TOTAL EXTERIOR DISPLAY = 3,078 SF / 500 = 6.16 SPACES
TOTAL CUSTOMER PARKING = 85 SPACES
TOTAL INVENTORY PARKING = 42 SPACES
TOTAL DISPLAY PARKING = 19
TOTAL PARKING = 146 SPACES
BICYCLE PARKING (PAMC 18.52.040 TABLE 1) = 1 SPACE PER 10 EMPLOYEES, 40 EMPLOYEES = 4 BIKE SPACES
2 LOADING SPACES = 12' X 45'

EV CHARGING STATIONS = (PAMC 16.14430 SECTION A5.106.5.3.5) REQUIRES
86 SPACES * 5% = 5 EV CHARGERS (2 DUAL MOUNT AND 1 SINGLE).

EXISTING SITE SUMMARY

EXISTING PARCEL:	110,432 SF OR 2.535 AC
EXISTING FLOOR AREA:	15,207 SF
EXISTING PARKING:	161 SPACES

[HR] - High-rise building

The Green Building Survey is a required project submittal. The survey can be found at the following link. The online survey shall be completed and a Green Building Survey Report will be sent in an email. Include a copy of the survey report on a separate page in this plan set. Please indicate the reference page here _____.

The Energy Star Benchmark Portfolio profile is a required project submittal. The profile can be found at the following link. The portfolio profile shall be opened and a screenshot shall be included on a separate page in this plan set. Please indicate the reference page here _____.

Special Inspector Acknowledgement

The project will be verified by a COMMERCIAL GREEN BUILDING SPECIAL INSPECTOR

I have reviewed the project plans and specifications, and they are in conformance with the CALGreen mandatory and elective measures claimed. I have reviewed and understand the after-construction requirements below.

Signature (Green Building Special Inspector)

Print Name

Phone or Email

Date

Certified Energy Analyst Acknowledgement

The project will be verified by a CERTIFIED ENERGY ANALYST

REQUIREMENT EFFECTIVE ON APRIL 1, 2020

The Certificate of Compliance shall be prepared and signed by a Certified Energy Analyst and the energy budget for the Proposed Design shall be no greater than the Standard Design Building.

I am a Certified Energy Analyst with the California Association of Building Energy Consultants as of the date of submission of a Certificate of Compliance as required under Section 10-103 of the Building Energy Efficiency Standards for Residential and Non-Residential Buildings.

Signature (Certified Energy Analyst)

SECTION TO BE COMPLETED AFTER CONSTRUCTION

In order to schedule a final building inspection with the Building Department, follow the procedures below.

☐ Schedule a two-part Final Green Building Inspection with the City Green Building Personnel in accordance with the Palo Alto Non-Residential Green Building Inspection Guideline.

☐ At Part 1 of the Final Green Building Inspection prepare all submittals and supporting documentation for the items identified with an "X" under the "Y" column of this sheet in accordance with the Green Building Inspection Guideline.

☐ At Part 2 of the Final Green Building Inspection prepare for a field inspection for the items identified with an "X" under the "Y" column of this sheet in accordance with the Green Building Inspection Guideline.

I certify that:

☐ There have been no alterations that have impacted the energy report for the project, unless the new report is provided.

☐ All mandatory CALGreen measures and required electives noted in the checklist have been implemented, unless a new checklist is provided along with support for alternative electives claimed.

☐ Within six months (6) from the date of final inspection I will provide the City with the project's Commissioning Report (only required for new projects over 10,000 SF) and execute compliance with landscaping measures, unless completed at the time of final inspection.

Signature (Green Building Special Inspector)
