

2026 Monthly Fuel Sales

The Palo Alto Airport transitioned fuel providers in January 2026. The new fuel provider is currently offering UL94 unleaded aviation fuel at the Airport. Airport staff are working closely with the fuel provider to share updated information with tenants regarding the availability and use of unleaded fuels.

The Airport will continue to work toward reducing the use of 100LL while ensuring that any transition to unleaded aviation fuels is implemented safely and in compliance with applicable Federal Aviation Administration regulations.
